Re:	Call for Comments for 802.16n AWD	
Abstract	In this contribution, we propose text of multi-mode operation for 802.16n.	
Purpose	To discuss and adopt the proposed text in the 802.16n draft Text	
Notice	<i>This document does not represent the agreed views of the IEEE 802.16 Working Group or any of its subgroups. *NICT*

### 1. Introduction

This Document specifies the process of HR-MS to operate as an HR-BS. Two operation modes are specified: proactive mode and reactive mode.

### 4. Text Proposal for IEEE 802.16n AWD

Xxx

Note:

The text in **BLACK** color: the existing text in AWD

The text in **RED** color: the removal of existing AWD text

The text in **BLUE** color: the new text added to AWD

[-----Insert the following text to Section 17.2.1-----]

#### 17.3.1 Multi-mode operation

##### 17.3.1.3 Base Station Function for HR-MS (BS Mode)

HR-MS shall only start its BS mode when its superordinate HR-BS is unavailable in the HR network. The HR-MS may start operating as a HR-BS in a Proactive mode or an Reactive mode. For proactive mode, the mode switch is directed by the superordinate HR-BS of the HR-MS; In reactive mode, the mode switch is initiated by the HR-MS itself.

##### Proactive Mode Operation

For proactive mode operation, the superordinate HR-BS maintains a topology table of its subordinate HR-MSs which are capable of role changing to HR-BS. The candidate HR-MSs may be arranged in an order according to the measured signal power at HR-BS or other metrics. When the HR-BS fails, the HR-MS at the first place of maintained table will start to operate on its BS mode. The HR-BS updates this table periodically based on the topology information obtained.

##### Reactive Mode Operation

For reactive mode, the HR-MSs which are capable of role changing to HR-BS may contend for operating at BS mode when the superordinate HR-BS fails.
