Venue:

Meeting 46, 13-16 November, 2006

Base Document:

http://le.wirelessman.org/C80216h-06_104.pdf

Purpose:

Specify the interference management procedure in the operating stage and modify the information table.

Notice:

This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

Release:

The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.

IEEE 802.16 Patent Policy:

The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures <http://ieee802.org/16/ipr/patents/policy.html>, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair <mailto:chair@wirelessman.org> as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site <http://ieee802.org/16/ipr/patents/notices>.

Outline

- Purpose
- Interference management in operating stage

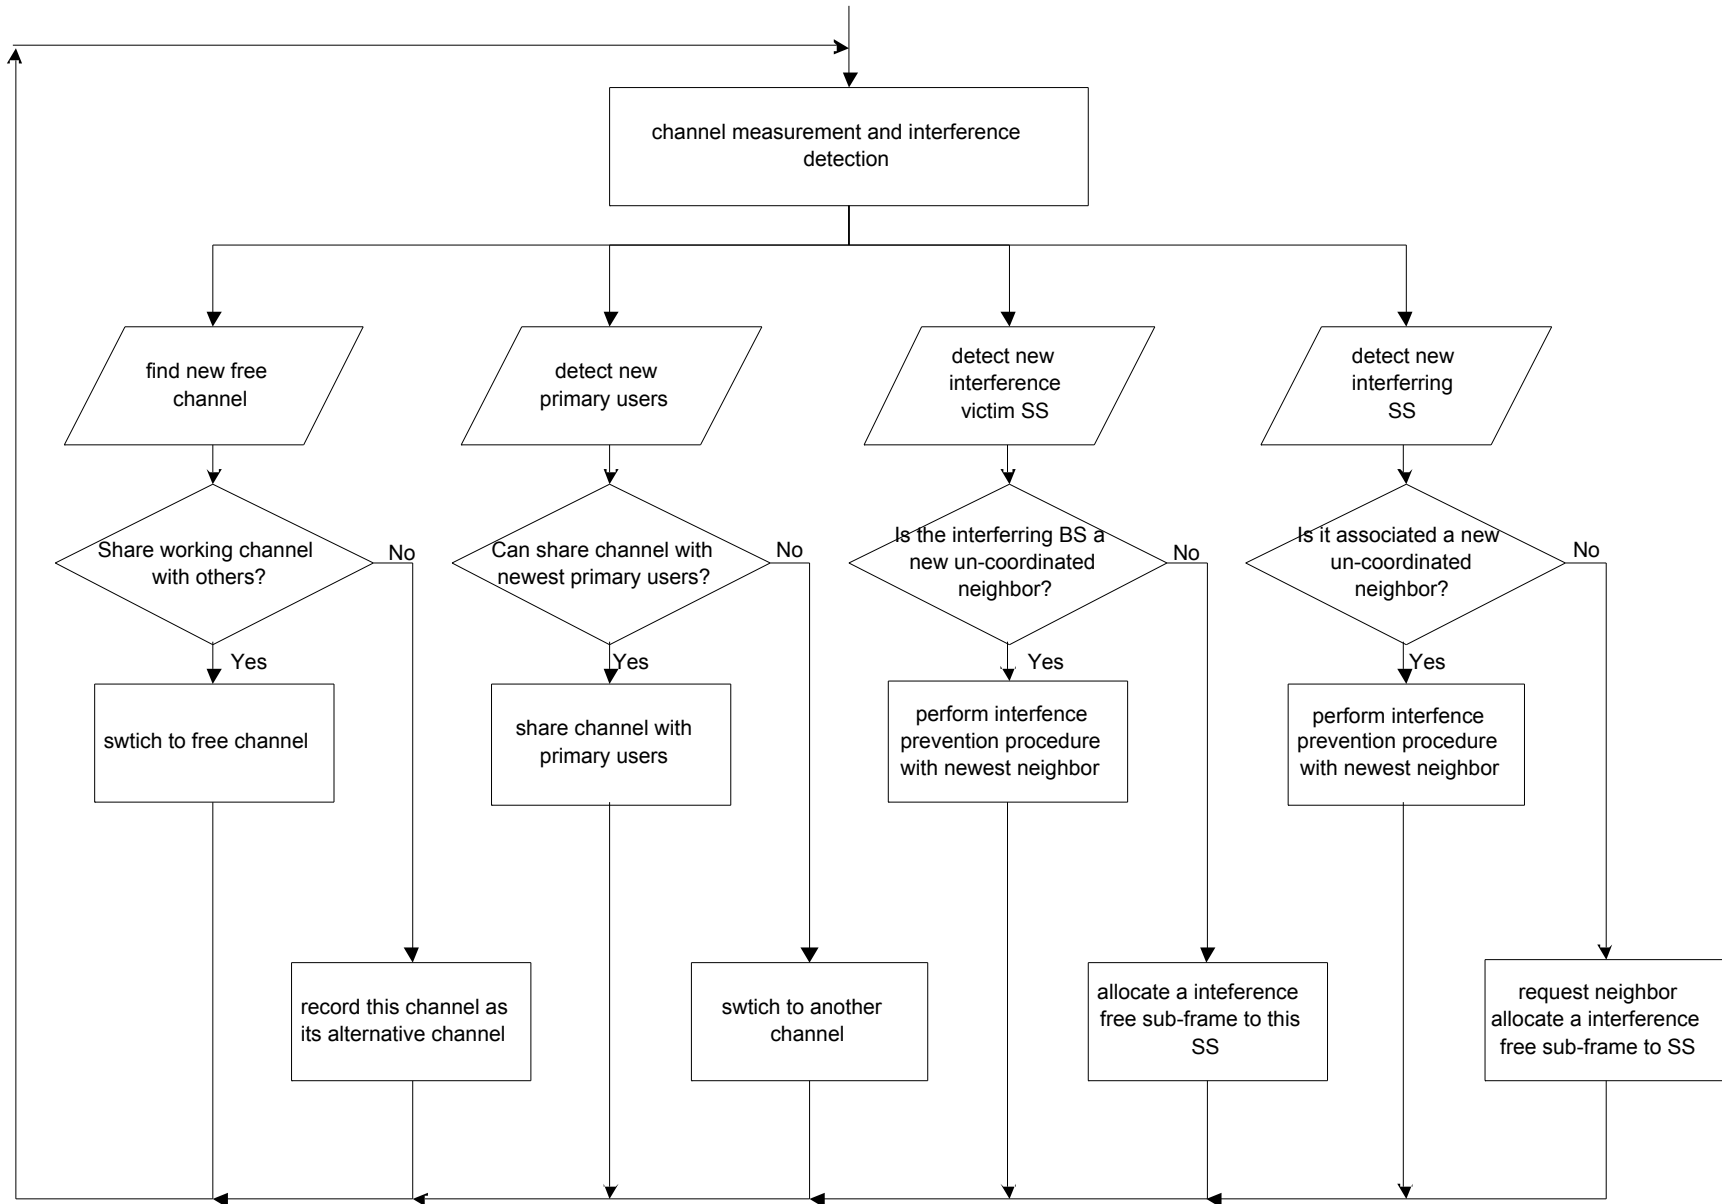

Purpose

- Purpose: Specify the interference management procedure in the operating stage
 - Interference identify and interference in initial stage is described in details.
 - No systematic description on the interference management in the operating stage in the current draft
- Modify the information table
 - Suitable to interference management
 - Erase overlapped IE
 - May be required for further modification

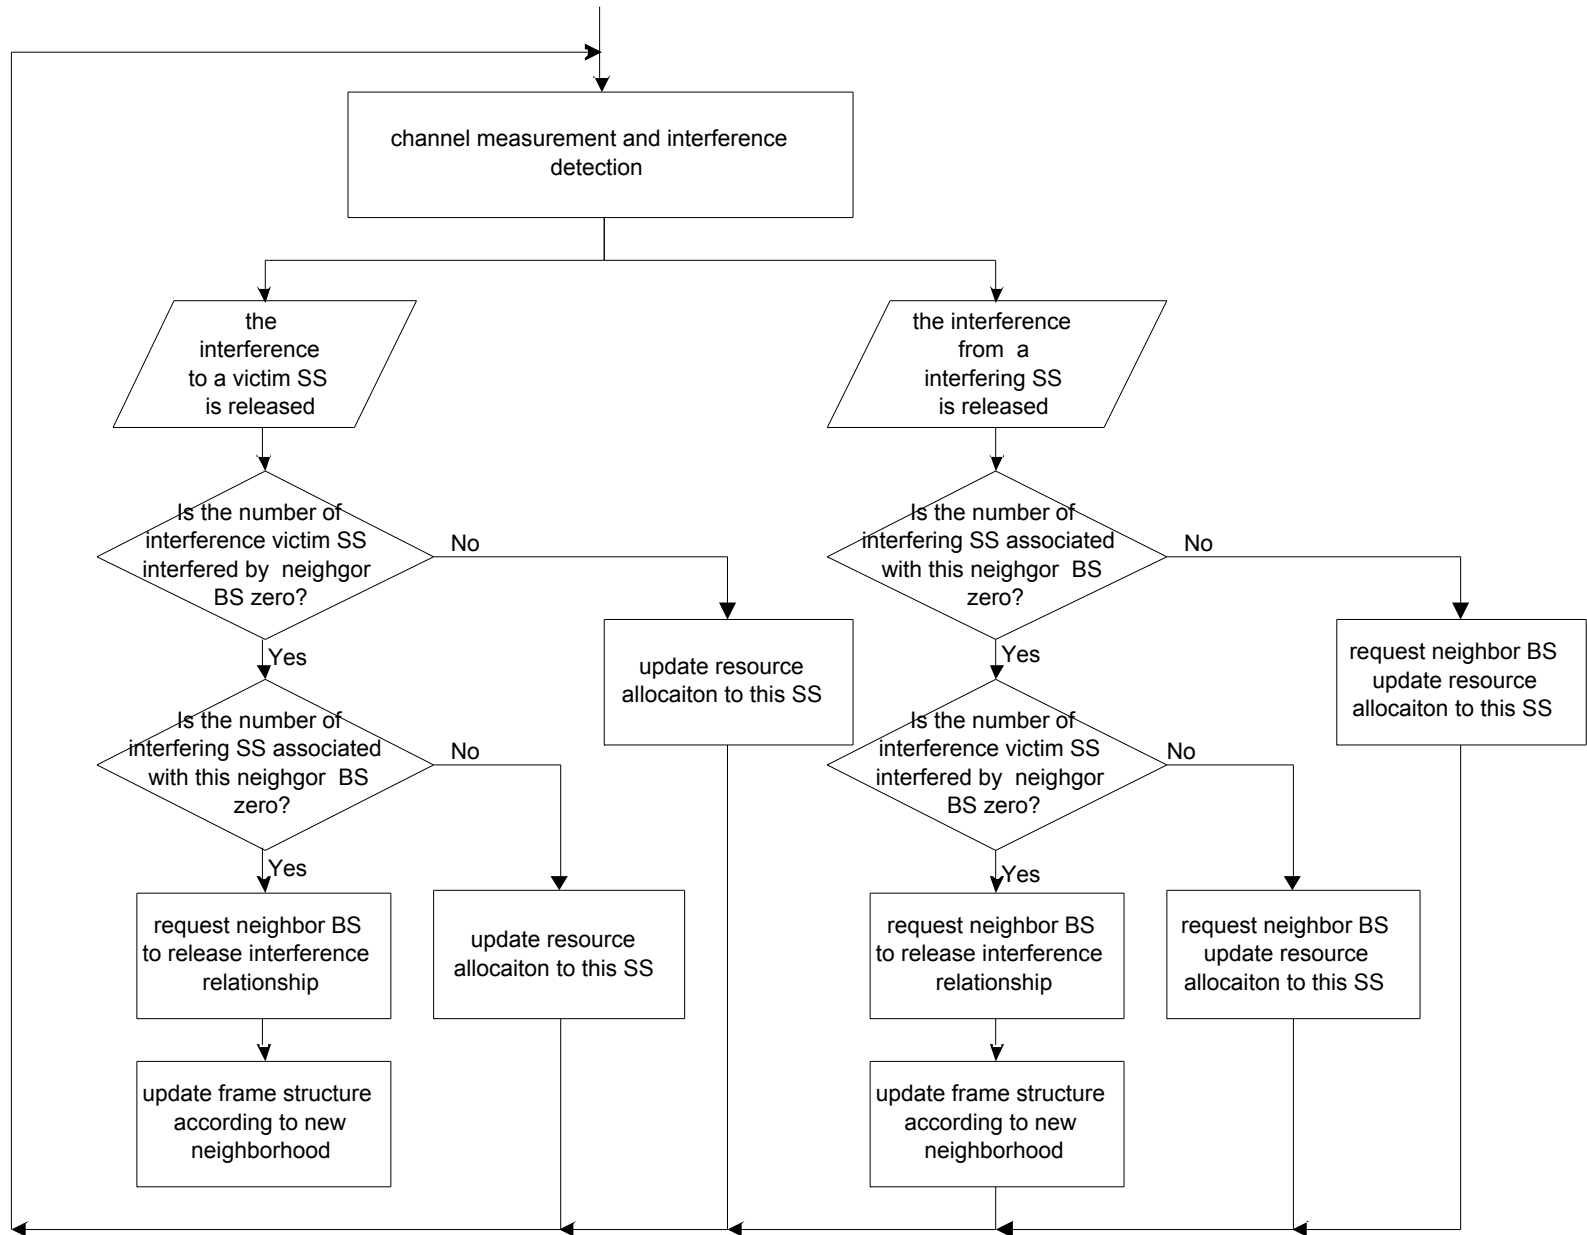

Interference Management in the Operating Stage

- Similar to initialization of BS, interference management in the operating stage is divided into two parts
- Initialization Stage:
 - All time can be used for interference identity and channel measurement
 - Find free channel & free sub-frame to work on
 - Initialize and creation information table
- Operating Stage
 - Only quiet period can be used for interference identity and channel measurement
 - Find free channel & free sub-frame on non-working channel
 - Allocate resource according to the latest interference state

Interference Management Procedure in the Operating Stage - 1

Interference Management Procedure in the Operating Stage - 1

Conclusion

- Interference management in the operating stage is introduced.
- A text is proposed to be added into the section 15.1.3.1
