| Patent Policy and Procedures | The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures &lt;http://ieee802.org/16/ipr/patents/policy.html&gt;, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair &lt;mailto:chair@wirelessman.org&gt; as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site &lt;http://ieee802.org/16/ipr/patents/notices&gt;.
1 Introduction

This document provides the comments and the suggested updates to “Table of Contents of Task Group Working Document”, IEEE 802.16j-06/017r1. The objective of the proposal is to keep MMR TOC to be consistent with the existing standards document (IEEE Std. 802.16-2004, IEEE Std 802.16e-2005, IEEE Std 802.16-2004/Cor1-2005).

In the following sections, the updates are highlighted with red color.

2 Proposed Table of Contents

1. Overview
   1.1 Scope
   1.2 Purpose
   1.3 Frequency bands
   1.3.4 Air interface nomenclature and PHY compliance
   1.4 Reference model
   1.4.2 MMR network architecture
      1.4.2.1 Overview
         “This section defines MMR network elements including MMR-BS, RS and MS”
   1.4.3 MMR network interface
         “This section defines all MMR network interfaces between MMR elements including MMR-BS-RS, RS-RS, RS-MS”

2. References

3. Definitions

4. Abbreviations and acronyms

6. MAC common part sublayer
   6.1 PMP
      6.1.1 MMR MAC protocol stack and MMR sublayer
         “This section provides the MMR protocol architecture”
   6.3 Data/Control plane
      6.3.1 Addressing and connections
         6.3.1.2 MMR network Relay Station identity
            “This section defines MMR RS addressing and naming scheme”
      6.3.1.3 MMR connection management
            “This section specifies how an end-to-end connection is identified and managed in MMR network”
   6.3.2 MAC PDU formats
      6.3.2.1 MAC header formats
         6.3.2.1.3 MMR MAC header formats
      6.3.2.2 MAC subheaders and special payloads
         6.3.2.2.8 MMR MAC subheaders and special payloads
      6.3.2.3 MAC management messages
         6.3.2.3.62 MMR MAC management messages
   6.3.3 Construction and transmission of MAC PDUs
   6.3.4 ARQ mechanism
6.3.6 Bandwidth allocation and request mechanisms
   6.3.6.7 MMR bandwidth allocation and request mechanisms
6.3.7 MAC support of PHY
   6.3.7.7 MMR MAC support of PHY
6.3.8 Contention resolution
6.3.9 Network entry and initialization
   6.3.9.16 MMR network entry and initialization
6.3.10 Ranging
   6.3.10.1 Downlink burst profile management
      6.3.10.1.1 MMR burst profile management
6.3.11 Update of channel descriptors
   6.3.12 Assigning SSs to multicast groups
      6.3.12.2 MMR Assigning SSs to MMR multicast groups
   6.3.13 Establishment of multicast and broadcast transport connections
      6.3.12.2 MMR Establishment of multicast and broadcast transport connections

6.3.14 QoS
6.3.17 MAC support for HARQ
6.3.18 DL CINR report operation
   6.3.18.3 MMR DL CINR report operation
6.3.19 optional Band AMC operations using 6-bit CQICH encoding
6.3.21 Sleep mode for mobility-supporting MS
   6.3.21.7 MMR sleep mode support
6.3.22 MAC layer handover procedures
   6.3.22.4 MMR handover procedures
6.3.23 Multicast and broadcast services (MBS)
   6.3.23.3 MMR multicast and broadcast services
6.3.24 MS Idle Mode (optional)
   6.3.24.10 MMR MS idle mode support

7. Security sublayer
7.1 Architecture
   7.1.4 MMR security scheme
7.2 PKM protocol
7.3 Dynamic SA creation and mapping
7.4 Key usage
7.5 Cryptographic methods
7.6 Certification profile
7.7 Pre-Authentication
7.8 PKMv2

8. PHY
8.4 WirelessMAN-OFDMA PHY layer
8.4.1 Introduction
8.4.4 Frame structure
   8.4.4.8 MMR frame structure
8.4.5 Map message fields and IEs
   8.4.5.8 MMR zone
8.4.7 OFDMA ranging
8.4.8 Space-Time Coding (optional)
8.4.9 Channel coding
8.4.10 Control mechanisms
8.4.11 Channel quality measurements
8.4.12 Transmitter requirements
8.4.13 Receiver requirements
8.4.14 Frequency control requirements
8.4.15 Optional HARQ support

9. Configuration
   9.3 MMR-BS configuration
   9.4 RS configuration

10. Parameters and constants
10.1 Global values
10.2 PKM parameter values
10.3 PHY-specific values
   10.3.5 MMR PHY parameters and definitions
10.4 Well-known addresses and identifiers

11. TLV Encodings
   11.20 MMR TLV encodings

Annex I MMR routing and path management Scenarios (informative)
   "To provide examples of MMR routing and path management based on the usage scenarios"

Annex J MMR system profiles (informative)
   MMR MAC profiles
   MMR system PHY profiles
   MMR RF profiles
