Venue:
IEEE 802.16 Session #47, London, UK

Base Document:
None

Purpose:
Propose to adopt the adaptive HARQ ACID expansion mechanism described herein into IEEE 802.16j.

Notice:
This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

Release:
The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE’s name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE’s sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.

IEEE 802.16 Patent Policy:
The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures <http://ieee802.org/16/ipr/patents/policy.html>, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair <mailto:chair@wirelessman.org> as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site <http://ieee802.org/16/ipr/patents/notices>.
Proposal for Adaptive HARQ ACI D Expansion on Relay Links

 Requirement of Relay Links

- Relay stations have to carry traffic initiated from or terminated at all the MSs associated with it.
  - Traffic aggregation naturally occurs on relay links.

- High performance is thus demanded, in order to support aggregated traffic on relay links.
Problem of Current HARQ ACID Size

- **Major findings:**
  - As the number of parallel HARQ channels decreases, the achievable throughput drops significantly.
  - Current HARQ ACID field can support up to 16 HARQ channels.
Proposed Solution Approach

- For RS link, increase the maximum number of parallel HARQ channels supported per terminal on relay link.

- The actual number of parallel HARQ channels supported by each terminal on relay link can be indicated by TLVs in SBC-REQ/SBC-RSP handshake.
  - The TLVs can specify the number of UL and DL HARQ channels that the SS/MS support.

- The actual number of parallel HARQ channels to be used can be specified and negotiated by TLVs in DSA-REQ/DSA-RSP, and REG-REQ/REG-RSP handshake.
  - The TLV not only indicates whether the connection uses HARQ or not, but also conveys the actual number of HARQ channels that the HARQ transmitter desires to use.
