Given the fact that this is supposed to be a simple extraction of LAG into a separate standard, it is inappropriate to re-root the management arc. And actually in Annex 6A and Annex 6B it is not.

**Suggested Remedy**

Change this note back to the original text in 802.3-2005

---

The REFERENCES in the MIB have changed. So the MIB has changed. You must at least change the date, and possibly add a REVISION line to acknowledge the original. And we may want to change the WG name as well...

**Suggested Remedy**

Change the LAST-UPDATED date to today

Add a REVISION line for the original version noting it was published in 802.3ad

Add another REVISION line with today’s date indicating that the references were updated as a result of moving to a separate document.

Finally, update the CONTACT-INFO to point to 802.1 WG and update the DESCRIPTION to 802.1AX

---

The note is indeed incorrect as the arcs have not been deprecated. There however doesn’t seem to be much point including the old note either. Based on this the note will simply be deleted.

---

Given the fact that this is supposed to be a simple extraction of LAG into a separate standard, it is inappropriate to re-root the management arc. And actually in Annex 6A and Annex 6B it is not.

**Suggested Remedy**

Change this note back to the original text in 802.3-2005

---

The REFERENCES in the MIB have changed to match the references in 802.1AX which is appropriate. However the preamble ‘IEEE 802.3 Subclause’ is no longer correct. And it is not necessary since the MIB is part of the standard that it is managing.

**Suggested Remedy**

Delete ‘IEEE 802.3 Subclause’ from the REFERENCE lines of the MIB throughout the MIB

---

See comment #46. This note will simply be deleted.
