

Proposed remedy:

1. Modify definitions of pse\_avail\_pwr, pse\_avail\_pwr\_pri, pse\_avail\_pwr\_sec:  
“This variable indicates the highest power PD Class ~~that could be supported~~ the PSE may assign by Physical Classification. The value is determined in an implementation-specific manner. See Table 33-X.”
2. Modify definitions of class\_num\_events, class\_num\_events\_pri, class\_num\_events\_sec:  
“A variable indicating the maximum number of class events performed by the PSE on the Secondary Alternative. A variable that is set in an implementation-dependent manner. See Table 33-X”
3. Page 72 Line 35, add the following text:  
“Type 3 and Type 4 PSEs shall meet at least one of the allowable variable definition permutations described in Table 33–7 and Table 33-X.”
4. Add the following table beneath Table 33–7:

Single-signature PDs		Dual-signature PDs	
pse_avail_pwr	class_num_events	pse_avail_pwr_pri, pse_avail_pwr_sec	class_num_events_pri, class_num_events_sec
0,1,2,3	1	1,2,3	1
4	2	4	2
5,6	4	5	4
7,8	5
