

Proposed Remedy for comment #267).
Comment (#90 clause 33.2.6 page 90 line18)

Change from:

"In any operational state, the PSE shall not apply operating power to a pairset until the PSE has successfully detected a valid signature over that pairset, except as specified in 33.2.8.1 regarding transitions between 2-pair and 4-pair power."

To:

"In any operational state, the PSE shall not apply operating power to a pairset until the PSE has successfully detected a valid signature over that pairset. When PSE is already in POWER_UP or POWER_ON states, it allowed to transition between 2-pair and 4-pair power without redoing detection. See 33.2.8.1.
