Implement the proposed revision text in Maintenance Request 1342
[http://www.ieee802.org/3/maint/requests/maint_1342.pdf](http://www.ieee802.org/3/maint/requests/maint_1342.pdf). The proposed revision text is:
"Allocate the following MDIO bits:
1.26.9 for 100GBASE-SR2 ability
1.26.8 for 100GBASE-CR2 ability
1.26.7 for 100GBASE-KR2 ability
1.26.3 for 100GBASE-DR ability
1.23.2 for 200GBASE-SR4 ability
1.23.1 for 200GBASE-CR4 ability
1.23.0 for 200GBASE-KR4 ability

## SuggestedRemedy

Allocate MDIO bits as described in the comment.

## Comment Type E Comment Status $\mathbf{X}$

The two lists of options for PMDs in Figure 122-1 have three items each. In such lists, it is uncommon to have more than one instance of "or"

For the conjunction "and" there is a long precedence of using only one instance in such lists.

SuggestedRemedy
Change "200GBASE-FR4, or 200GBASE-LR4, or 200GBASE-ER4" to "200GBASE-FR4, 200GBASE-LR4, or 200GBASE-ER4"

Change "400GBASE-FR8, or 400GBASE-LR8, or 400GBASE-ER8" to "400GBASE-FR8, 400GBASE-LR8, or 400GBASE-ER8".

Comment Type E Comment Status X
Clause 122 now defines six PMDs. In many cases, the names of all six are listed in the text where it refers to all PMDs as a group. This makes the text harder to read (and maintain) than is necessary.

In cases where all PMDs are referred to as one group, using the generic term "PMD" rather than listing all names should be sufficient. It will also help highlight the cases where specifications are not the same for all PMDs.

A similar approach has been used in 802.3 cd clauses 136 and 137 , which defined several similar PMDs per clause. Text in the spirit of the last paragraph of 136.2 may be used to make the term "PMD" explicitly refer to all PMDs.

Examples I found:

- Table 122-1 title
- Figure 122-1 title
-122.2 first paragraph
- 122.5
- Figure 122-2 title
- 122.7 subclause heading and content
- Table 122-8 title
- 122.7.1, 122.7.2 subclause headings
- 122.7.3 subclause heading and text
- Table 122-13 title
- 122.9.4 and 122.9.5 text
- 122.11 text
- 122.11.3 text

To a lesser extent this also applies to clauses 138 and 139 which now define three PMDs each.

SuggestedRemedy
Change all instances of "200GBASE-FR4, 200GBASE-LR4, 200GBASE-ER4, 400GBASE-
FR8, and 400GBASE-LR8, and 400GBASE-ER8 PMDs" (and similar lists) to "PMD", or similar shorter text as necessary (use editorial license).

Consider applying in clauses 138 and 139 as well.

Comment Type E Comment Status $\mathbf{X}$
The text here specifies (conditional) interoperation between:

- 200GBASE-ER4 and 200GBASE-LR4
- 400GBASE-LR8 and 400GBASE-FR8
- 400GBASE-ER8 and 400GBASE-FR8
- 400GBASE-ER8 and 400GBASE-LR8

But there are no similar requirements for interoperation between:
200GBASE-LR4 and 200GBASE-FR4

- 200GBASE-ER4 and 200GBASE-FR4

This is obviously intentional, since 200GBASE-FR4 has different wavelength specifications than the other two 200G PMDs.

However, it is quite difficult to read and understand which PMDs interoperate and which don't, since the text runs across the paragraph.

SuggestedRemedy
Separate the text starting from line 47 to the end of this paragraph to four new and separate paragraphs.

Consider adding a NOTE to clarify that 200GBASE-FR4 does not interoperate with either 200GBASE-LR4 or 200GBASE-ER4.

## Comment Type E Comment Status X

The editorial instruction says "delete... as follows:" and then lists the text to be deleted.
While this conforms to the style manual, it may be confusing for readers of this amendment before it is incorporated into a revision, since the text is not marked as deleted. It may be understood as if this item is still valid.

In comparison, the editorial instruction in 139.7.5.3 shows the similar text as deleted
Similarly in 138.8.10, 140.7.5, 140.7.10.
SuggestedRemedy
Use the "change" editorial instruction, and include the whole list of exceptions, marking the deleted one in strikethrough.

Similarly in the other subclauses mentioned in the comment.

Comment Type E Comment Status X
This draft adds three very short first-level subclauses to clause 122 (which will eventually become 122.12, 122.13, and 122.14). These subclauses deal with a common matter of interoperability.

For a better structure, these subclauses can be merged to a single first-level subclause 122a "Requirements for interoperation", with three second-level subclauses 122a.1, 122a.2, and 122a.3 (to enable separate cross-references).

Similarly in clause 139, 139.10a and 139.10b would better be 139.10a.1, and 139.10a.2. SuggestedRemedy

Change subclause hierarchy per the comment.

## Comment Type T Comment Status X

The TDECQ limit for 400GBASE-ER8, 3.4 dB , is higher than any other SMF 50G/lane
TDECQ limit. A low chirp transmitter could take advantage of this and present the receiver with a slower signal than it had been designed for (if the TIA was designed for FRn and
LRn, and one makes an ERn receiver by replacing a pin with an APD). We introduced the transition time spec to catch this sort of thing but unfortunately, it appears to be too loose.

SuggestedRemedy
Reduce the transition time limit, (to 30 or 32 ps TBD), or introduce a maximum cursor tap limit. The limit should be checked with a commercial simulator. It should be applied to all SMF 50G/lane PMDs but could be applied to 400GBASE-ER8 alone.
Proposed Response Response Status 0
