Chair noted that significant time is being spent on "pro-forma" motions, that are near unanimity from the WG's. The chair suggested putting such motions on the consent agenda. Concern was raised that WG votes that were near unanimity did not necessarily reflect whether there was an issue with such motions. However, it was noted that in such instances, an agenda item could be pulled from the consent agenda.

#### Item 3.00 Action Item – Thaler to recommend policy regarding putting items on consent agenda for June Teleconference, including policies regarding notification (agenda versus reflector notification).

All comments were accepted except:

2.1 Title: delete "Approved Draft"

Suggested title replacement: "Standard for Low-Rate Wireless Personal Area Networks (WPANs) Amendment: Enabling/updating the use of Regional Sub-GHz bands"

**Response:** This MyProject field is not under our control. My guess is this reflects the fact that the 15.4-2015 revision has been approved but not published. Once published, this field will most likely update to the Title of the Revision.

# Revision of IEEE Std 802.16

- IEEE-SA Standards Board Operations Manual:
  - Up to three amendments can be approved before the standard shall be revised, unless the base standard has been approved within the past three years. In such a case, multiple amendments may be added until the base standard is three years old. After the three-year period, RevCom shall defer consideration of additional amendments or corrigenda until a revision or a two-year extension request is approved by the IEEE-SA Standards Board.
  - If, for any extenuating circumstances, an exception to these rules is required, the Sponsor shall take its request for a two-year extension to RevCom. A project plan outlining the rationale for the request, as well as a schedule for the revision, also shall be submitted. RevCom will review the request and make a recommendation to the IEEE-SA Standards Board.
  - WG decided to defer submission of P802.16Rev PAR pending consideration of extension request.

#### Modified title

Standard for Ethernet Amendment: Media Access Control Parameters, Physical Layers and Management Parameters for 200 Gb/s and 400 Gb/s Operation

#### Summary of modification request

During the development of IEEE P802.3bs 400 Gb/s Ethernet, it was decided to develop 50 Gb/s optical and electrical signaling. With this signaling available, a family of Ethernet rates, based on multiple instantiations of 50 Gb/s, e.g. 50 Gb/s Ethernet, 100 Gb/s Ethernet, 200 Gb/s Ethernet, and 400 Gb/s Ethernet is emerging. The development of 200 Gb/s Ethernet physical layer specifications equivalent to the existing 400 Gb/s Ethernet specifications is being added to this project.

### Title

Standard for Ethernet Amendment: Physical Layer and Management Parameters for Serial 25 Gb/s Ethernet Operation Over Single-Mode Fiber

### Scope of project

The scope of this project is to add point-to-point single-mode fiber Physical Medium Dependent (PMD) options for serial 25 Gb/s operation at reaches greater than 100 m by specifying additions to, and appropriate modifications of, IEEE Std 802.3

### IEEE P802.3cc 25 Gb/s Ethernet PMD(s) for Single Mode Fiber PAR and CSD responses

### Need

The project is needed to provide multiple system operators and telecommunications operators with an IEEE 802.3 25 Gb/s Ethernet serial interconnect solution at reaches greater than 100 meters using single-mode fiber (SMF) for application areas including enterprise campus, carrier metro and other similar areas.

#### Title

Standard for Ethernet Amendment: Media Access Control Parameters for 50 Gb/s and Physical Layers and Management Parameters for 50 Gb/s, 100 Gb/s, and 200 Gb/s Operation

### Scope of project

Define Ethernet Media Access Control (MAC) parameters, Physical Layer specifications, and management parameters for the transfer of Ethernet format frames at 50 Gb/s over copper and optical media. Define additional Physical Layer specifications and management parameters at 100 Gb/s over copper and optical media. Define additional Physical Layer specifications and management parameters at 200 Gb/s over copper and multimode fiber physical media.

### IEEE P802.3cd 50 Gb/s Ethernet over a single-lane, next generation 100 Gb/s and 200 Gb/s Ethernet PAR and CSD responses

### Need

Rapid growth of server, network, and internet traffic is driving the need for higher data rates, higher density and lower cost solutions. Advances in 50 Gb/s signaling technologies can be leveraged to create optimized solutions based on single instance or multiple instances in parallel. IEEE Std 802.3 does not currently define 50 Gb/s Ethernet rates nor define 100 Gb/s or 200 Gb/s Ethernet solutions based on these new technologies.

### Title

Standard for Ethernet - Corrigendum 1: Multilane timestamping

#### Scope of project

Clarification of which lane of the media dependent interface (MDI) of a multilane Physical Layer entity (PHY) is used as the timestamping reference point

### Need

The lane of the MDI of a multilane PHY that should be used as the timestamping reference point needs to be specified. Otherwise, the entire inter-lane skew may need to be accounted for in the receive minimum and receive maximum path data delay register values, impacting the timing accuracy that can be supported.
