5.1 Approximate number of people expected to be actively involved in the development of this project: 15

5.2.a Scope of the complete standard: For the purpose of providing compatible authentication, authorization, and cryptographic key agreement mechanisms to support secure communication between devices connected by IEEE 802® Local Area Networks (LANs), this standard a) Specifies a general method for provision of port-based network access control. b) Specifies protocols that establish secure associations for IEEE Std 802.1AE™ MAC Security. c) Facilitates the use of industry standard authentication and authorization protocols.

5.2.b Scope of proposed changes: Correction of technical errors identified and agreed by the IEEE 802.1 Working Group maintenance activity comprising: <https://www.802-1.org/items/462>.

5.3 Is the completion of this standard contingent upon the completion of another standard? No

5.4 Purpose: This document will not include a purpose clause.

5.5 Need for the Project: The IEEE 802.1 maintenance activity has identified a small number of corrections to the base text and the management modules that are needed in order to correct technical errors in the existing text. The errors limit the use of the management modules in implementations. The corrigendum will correct these errors.

5.6 Stakeholders for the Standard: Designers, implementers, manufacturers, distributors, and users of local area networking equipment.
