Thanks to the editor and all contributors to the standard. Thanks to the chairs and former chairs for their guidance and support.

IEC TC65 and SC's Plenary

Tokyo from Jun 26 to Jul 3, 2026

Information: IEC reports decisions/resolutions in a DL (decision list) document, separated document to meeting minutes.

Two approved resolutions supports **IEC/IEEE 60802 ED2**.

Resolution # 2026-08 (agenda item #6.7)

*SC65C authorizes WG18 to start maintenance of IEC/IEEE 60802 as a Joint Project with IEEE. Vote: Unanimous **approval***

→ Clear statement for an Edition 2.

And Resolution # 2026-01 (agenda item #5)

SC65C notes that an OSD / Fast Track process for maintenance work developed outside IEC and not using OSD has been defined with IEC Secretariat, circulated as an INF document (65C/1420/INF). SC65C authorizes the Working Groups to use this process, when relevant on a case-by-case basis, for the maintenance of documents originating from external bodies such as Consortia, joint project partner with IEEE, etc.

*Vote: Unanimous **approval***

→ Needs some more explanation:

- “Fast Track” Standards development process is between Standards development with OSD (Online Standards Development) and Adoption.
- Offers less regulation as normal development process – **no CD stage**.
- Offers the usage of **Word** for the development process
- 65C/1420/INF, SC 65C Standards Development Process (OSD / Fast Track), 2026-05-15. Follow the link for a **slide deck**.
