v02

Updated startup state machine after discussion on TSN call 2026-04-13

State machine procedures

- **CreateLRPPortal()**

This procedure adds a RAP LRP-Portal ([CS]:8) by issuing a Local Target Port request ([CS]:10.2.2) for this Bridge Port.

- **EnableMSRP()**

This procedure enables MSRP at this Port and declares MSRP attributes ([Q]:35.2.4).

- **DisableMSRP()**

This procedure withdraws any MSRP attributes ([Q]:35.2.4) and disables MRP at this Port.

State machine events

- The LRP-Portal-connected event is triggered by the reception of a Portal status indication(connected) ([CS]:10.2.6).
- The Reset-Operation-Mode event is triggered by the application to reset the state machine.
