Target Extension Request Information for a Modified PAR whose completion date is being extended past the original four-year life of the PAR:

13. Scope of Proposed Project:

Enhancements to the IEEE 802.11 Medium Access Control layer to provide, as appropriate, mechanisms that enable data integrity, data origin authenticity, replay protection, and data confidentiality for selected IEEE 802.11 management frames including but not limited to: action management frames, deauthentication and disassociation frames.

Is the completion of this document contingent upon the completion of another document?

No

14. Purpose of Proposed Project:

The purpose is to improve the security of some or all IEEE 802.11 management frames by defining enhancements such as data integrity, data origin authenticity, replay protection, and data confidentiality.

15. Reason for the Proposed Project:

The current IEEE 802.11 standard including amendment 'i' (security) addresses security of data frames but systems are still vulnerable to malicious attack because management frames are unprotected. For example, network disruption can be caused by malicious systems generating false information and impersonating valid equipment. The work envisioned in this PAR will reduce the susceptibility of systems to such attack and is of importance to all the current applications of IEEE 802.11 and both existing and anticipated amendments.

16. Intellectual Property:

21. Additional Explanatory Notes: (Item Number and Explanation)

The new amendment shall be compatible with the IEEE 802.11 MAC, and will not facilitate, enable or cause violation of regulatory restrictions that would limit its geographical usage. The new extensions shall not conflict with any mandatory portions of the IEEE 802.11 standards and specification and published amendments. IEEE 802.11 Task Group k and the IEEE 802.11 Wireless Network Management Study Group may take advantage of the mechanisms for protecting management frames developed under this PAR.
