Re:	Preparation of liaison contributions to ITU-R.
Abstract	The attached draft contribution was developed by the ITU-R Liaison Group in response to a liaison statement from ITU-R WP 5D requesting parameters of radio interface technologies. It was approved on behalf of the WG subject to confirmation at the 802.16 Closing Plenary of 17 July 2008, where it was subsequently approved. Note: The contribution was approved by the IEEE 802 EC on 18 July 2008.
Purpose	Approve the proposed contribution to contribute to ITU-R.
Notice	<i>This document does not represent the agreed views of the IEEE 802.16 Working Group or any of its subgroups. It represents only the views of the participants listed in the "Source(s)" field above. It is offered as a basis for discussion. It is not binding on the contributor(s), who reserve(s) the right to add, amend or withdraw material contained herein.</i>
Release	The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.
Patent Policy	The contributor is familiar with the IEEE-SA Patent Policy and Procedures: <a href="http://standards.ieee.org/guides/bylaws/sect6-7.html#6">http://standards.ieee.org/guides/bylaws/sect6-7.html#6</a> and <a href="http://standards.ieee.org/guides/opman/sect6.html#6.3">http://standards.ieee.org/guides/opman/sect6.html#6.3</a> . ## **1 Source information**

This contribution was developed by IEEE Project 802®, the Local and Metropolitan Area Network Standards Committee (“IEEE 802”), an international standards development committee organized under the IEEE and the IEEE Standards Association (“IEEE-SA”).

The content herein was prepared by a group of technical experts in IEEE 802 and industry and was approved for submission by the IEEE 802.16™ Working Group on Wireless Metropolitan Area Networks, the IEEE 802.18 Radio Regulatory Technical Advisory Group, and the IEEE 802 Executive Committee, in accordance with the IEEE 802 policies and procedures, and represents the view of IEEE 802.

## **2 Discussion**

The IEEE thanks Working Party 5D (WP 5D) for the liaison letter ([IEEE L802.16-08/048](#)) requesting parameters and other information for IMT radio interface technologies in light of WRC-07 decisions. Our response below addresses all three topics raised in the liaison statement.

### **1) Current and planned relevant specifications**

WP 5D requests external organizations “*to inform it if they have developed, are developing, or plan to develop specifications for the frequency ranges identified by WRC-07 for IMT.*”

IEEE Std 802.16 and IMT-2000 OFDMA TDD WMAN support all the frequency ranges identified for IMT, including those identified by WRC-07.

IEEE 802.16 Working Group is currently developing a revision to IEEE Std 802.16 and expects to submit it, including TDD and FDD, as reflected in the M.1457 roadmap and the WP 5D Chairman’s report (Doc. 5D/242). In addition, the IEEE 802.16 WG is developing an amendment P802.16m which is expected to form the basis for a submission towards IMT-Advanced, as stated previously in IEEE contribution 8F/1083. In each case, the standard will include support for all the frequency ranges identified for IMT, including those identified by WRC-07.

## **2) Characteristics of IMT radio interfaces**

WP 5D requests external organizations to provide “*information about the characteristics of IMT radio interfaces appropriate for these frequency ranges. If this information is not yet available, ITU-R would appreciate an indication of when it could be provided.*”

Characteristics of the radio interfaces in IEEE Std 802.16 and IMT-2000 OFDMA TDD WMAN are already contained in Recommendation ITU-R M.1457.

## **3) IMT Parameters needed for the studies**

The WP 5D liaison letter also states that “*The urgency is greater for the 698-862 MHz band, because some forthcoming studies are expected in the near future, and the parameters of IMT in this band are planned to be determined during the next meeting of the relevant Working Party of ITU-R (8-15 October 2008, with a 1 October 2008 submission deadline).*”

With respect to the band 698-862 MHz and the parameters listed in the Annex to the liaison letter, IEEE notes that most of the items in Section 1 “Radio Interface Parameters” are already contained in M.1457 for IMT-2000 OFDMA TDD WMAN.

As for Sections 2 and 3, and some parameters in Section 1 of the Annex such as “interference criteria”, the IEEE has stated to the ITU-R in its previous contributions (Doc. 6-8-9/52) that system and deployment parameters used for sharing studies are best provided by industry groups such as the WiMAX Forum.
