

802.16.2a Study Group

Session#14 closing report

- Significantly increased interest at this meeting
 - Representatives from the 2-11 GHz standard activity participated in defining coexistence parameters
 - Objectives for this meeting were fully achieved
 - Substantive output documents were produced
 - Plan for period up to next meeting was prepared
- Ready to start formal project, once PAR is approved

Activities and results at Session #14

- Output document on parameters for point to point link interference scenarios produced (first draft)
- Output document on parameters for 2 — 11 GHz system interference scenarios produced (first draft)
- Antenna RPE document produced for use in future simulations (Output document).
- Previously used simulation tool was reviewed for adaptation to new scenarios — tool to be modified for next meeting
- 802.16.2a PAR was finalized for plenary approval
