 - 1 Editorial
- Annex K
 - no comments
- 1 received from Clause 5
- 22 comments in total
- Comments resolved.
 - 15 Accepted
 - 6 Accepted modified
 - **1 punted to PAH**

OAM - Clauses 12, 13, E, K

Comment Resolution Summary

- Remove 'RPR layer' term
- Add additional reasons for flush
- Add additional 'echo request steps'
- Replace 'echo confirm' with 'echo request'
- Replace 'interface' with 'ringlet'
- Clarify MLME functionality
 - Such that set is non-blocking
- Add configuration for filtering bad FCS frames
- Add usage of additional ifMIB attributes for errors & discards
- Make Reversion mode in MIB boolean
- Change thresholds in MIB to % from Kb
- Change discontinuity time MIB attributes
- Numerous editorials
 - spacing, formatting, duplicates, examples, references

OAM - Clauses 12, 13, E, K

Comment Punted to PAH

- **#318** - rprIfWrapControl should have a default of 'false' and a definition of 'true'
- Comment resolution discussion revealed confusion over implementation of wrapping and steering, specifically:
 - how does a MAC client choose wrap vs steering?
 - per packet or per system or per COS or per ring?
 - how is the information propagated?
 - how is the status reported?

OAM - Clauses 12, 13, E, K Issues

- Motion previously approved (2002-10-3-11) requesting that WG send RPR MIB and RPR Draft to IETF for MIB sanity check after WG ballot authorized.
- MIB needs to be aligned with rest of RPR sections (notably fairness and protection). MIB editor requires extra time after completion of other sections to do this.
