```

DESCRIPTION
    "The LLDP Management Information Base extension module for
    IEEE 802.3 organizationally defined discovery information."

```

Commented [MH1]: We should likely set up a contact for 802.3 to be used in MIBs. This should not be an individual, but rather an 802.3 organization email.

Formatted: Font: (Default) Courier New, 8 pt

REVISION "202307050000Z" - July 5, 2023

DESCRIPTION

```

    "Revision, based on an earlier version in IEEE Std 802.3.1-2013
    addressing changes from IEEE Std 802.3 revisions 2012, 2015, 2018,
    and 2022."

```

REVISION "201304110000Z" -- April 11, 2013

DESCRIPTION

```

    "Revision, based on an earlier version in IEEE Std 802.3.1-2011."

```

Formatted: Font: (Default) Courier New, 8 pt

REVISION "201102020000Z" -- February 2, 2011

DESCRIPTION

```

    "This revision incorporated changes to the MIB module to
    add objects to support management of Energy Efficient
    Ethernet (EEE) and Enhanced DTE Power via the MDI (PoE+)."

```

    maxFrameSize(3),
    eeeEnabled(4),
    eeeFastWakeEnabled(5),
    addEthernetCapabilities(6)
}
MAX-ACCESS read-write
STATUS current
DESCRIPTION
    "The lldpV2Xdot3PortConfigTLVsTxEnable, defined as a bitmap,
    includes the IEEE 802.3 organizationally defined set of LLDP

```

Formatted: Font: (Default) Courier New, 8 pt

TLVs whose transmission is allowed by the local LLDP agent by the network management. Each bit in the bitmap corresponds to an IEEE 802.3 subtype associated with a specific IEEE 802.3 optional TLV.

The bit 'macPhyConfigStatus(0)' indicates that the LLDP agent should transmit 'MAC/PHY configuration/status TLV'.

The bit 'powerViaMDI(1)' indicates that the LLDP agent should transmit 'Power via MDI TLV'.

The bit 'unused(2)' is no longer used; this was used for the 'Link Aggregation TLV' in the previous version.

The bit 'maxFrameSize(3)' indicates that the LLDP agent should transmit 'Maximum-frame-size TLV'.

The bit 'eeeEnabled(4)' indicates that the LLDP agent should transmit EEE TLV.

The bit 'eeeFastWakeEnabled(5)' indicates that the LLDP agent should transmit EEE Fast Wake TLV.

The bit 'addEthernetCapabilities(6)' indicates that the LLDP agent should transmit Additional Ethernet Capabilities TLV.

The default value for lldpV2Xdot3PortConfigTLVsTxEnable object is an empty set, which means no enumerated values are set.

The value of this object is restored from non-volatile storage after a re-initialization of the management system."

lldpV2Xdot3LocPSEAllocatedPowerValue OBJECT-TYPE

SYNTAX Integer32
MAX-ACCESS read-only
STATUS current
DESCRIPTION

"A GET returns the PSE allocated power value in units of 0.1W.
For a PSE, it is the power value that the PSE has currently
allocated to the remote system. The PSE allocated power value
is the maximum input average power that the PSE wants the PD
to ever draw under this allocation if it is accepted. For a PD,
it is the power value that the PD ~~mirrors~~ echoes back to the remote
system. This is the PSE allocated power value that was used by
the PD to compute the power that it has currently requested from
the remote system." ~~The PSE allocated power value is encoded
according to IEEE Std 802.3 Equation (7922), where X is the
decimal value of~~ lldpV2Xdot3LocPSEAllocatedPowerValue."

lldpV2Xdot3LocReducedOperationPowerValue OBJECT-TYPE

SYNTAX Integer32

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"A GET returns the reduced operation power value. For a PD, it

is a power value that is lower than the currently requested

power value. This reduced operation power value represents a

power state in which the PD could continue to operate, but with

less functionality than at the current PD requested power value.

The PSE could optionally use this information in the event that

the PSE subsequently requests a lower PD power value than the

PD requested power value. For a PSE, it is a power value that the

PSE could ask the PD to move to if the PSE wants the PD to move

to a lower power state. The definition and encoding of PD

requested power value is the same as described in

lldpV2Xdot3LocPDRequestedPowerValue. The default value for this

field is the hexadecimal value FFFF"
