<p>^{a)} Some Administrations may require a limit of 1270 nm.</p> <p>^{b)} See clause 6.</p> <p>^{c)} For wavelengths between the upper and lower wavelength limits, the maximum dispersion is linearly interpolated between the values given for the wavelength extremes. Where the maximum dispersion values are the same, this value is required to be met across the entire wavelength range.</p> <p>^{d)} Some Administrations may require 10 dB minimum attenuation instead of 12 dB, to do this, it is required to decrease the maximum output power of the transmitter or to increase the minimum overload of the receiver (or a combination of both).</p>
