Pre-connectorized single-mode cables shipped in 2023 to datacenter customers

Insights on pre-connectorized single mode cables shipped in 2023 to datacenter customers?

- Data is only for pre-connectorized lengths, one-ended and two ended pre-con
- These lengths may be:
 - Deployed within a data hall and spliced to a cable between data halls, one-ended only (M=3)
 - Spliced together, one ended only (M=2)
 - The entire length of the link (M=1)
- More data is needed from the datacenter operators to really understand length and concatenation distributions
