DRAFT

IEEE 802.3
Call For Interest

Automotive Optical Multi Gig
July 2019

Consensus presentation

Carlos Pardo

Objective of this meeting

- To measure the interest of starting a new study group to address:
  - Multi gigabit optical PHYs for Automotive applications

- In this meeting, we don’t need to:
  - Choose any technical solution
  - Fully explore the problem
  - Debate strengths and weaknesses of solutions
  - Choose any one solution
  - Create PAR or five criteria
  - Create a standard or specification

- Anyone on the room may speak & vote

- RESPECT… give it, get it

Agenda

- Market Drivers
- Technical Feasibility
- Market potential
- Why now?
- Q&A Panel
- Straw Polls

Panelists

- Carlos Pardo, KDPOF
- OEM affiliation 1
- OEM affiliation 2
- OEM affiliation 3
- TIER-1 affiliation 1
- TIER-1 affiliation 2

Market Drivers
Automotive Ethernet

- The automotive industry has decided to go into Ethernet

- Several 802.3 standards published or in preparation
  - 10 Mb/s (P802.3cg Task Force)
  - 100 Mb/s (100BASE-T1)
  - 1000 Mb/s (1000BASE-T1, 1000BASE-RH)
  - 2.5 , 5 & 10 Gb/s (P802.3ch Task Force)
  - 25 & 50 Gb/s (Study group)

- Industry associations are supporting the development of Ethernet for the automotive industry:
  - Open alliance
  - Jaspar

- Complementary standardization bodies are specifying “missing parts” for automotive Ethernet: Connectors, cables, interfaces, W&S, etc.
  - ISO 21111 within ISO - TC 22 - SC31 & SC32

Market Drivers
Automotive Optical Ethernet

- 1000BASE-RH is being used by several OEMs worldwide due to its intrinsic advantages:
  - Galvanic isolation
  - Superior EMC performance. Easy engineering.
  - Weight
- Optical and copper Ethernet are complementary, even in the same car.
  First car in the market with 1000BASE-RH will be in 2020.

Hideki Goto, Chairman of **JASPAR**'s Next Generation High-Speed Network Working Group and Group Manager at **Toyota** stated:

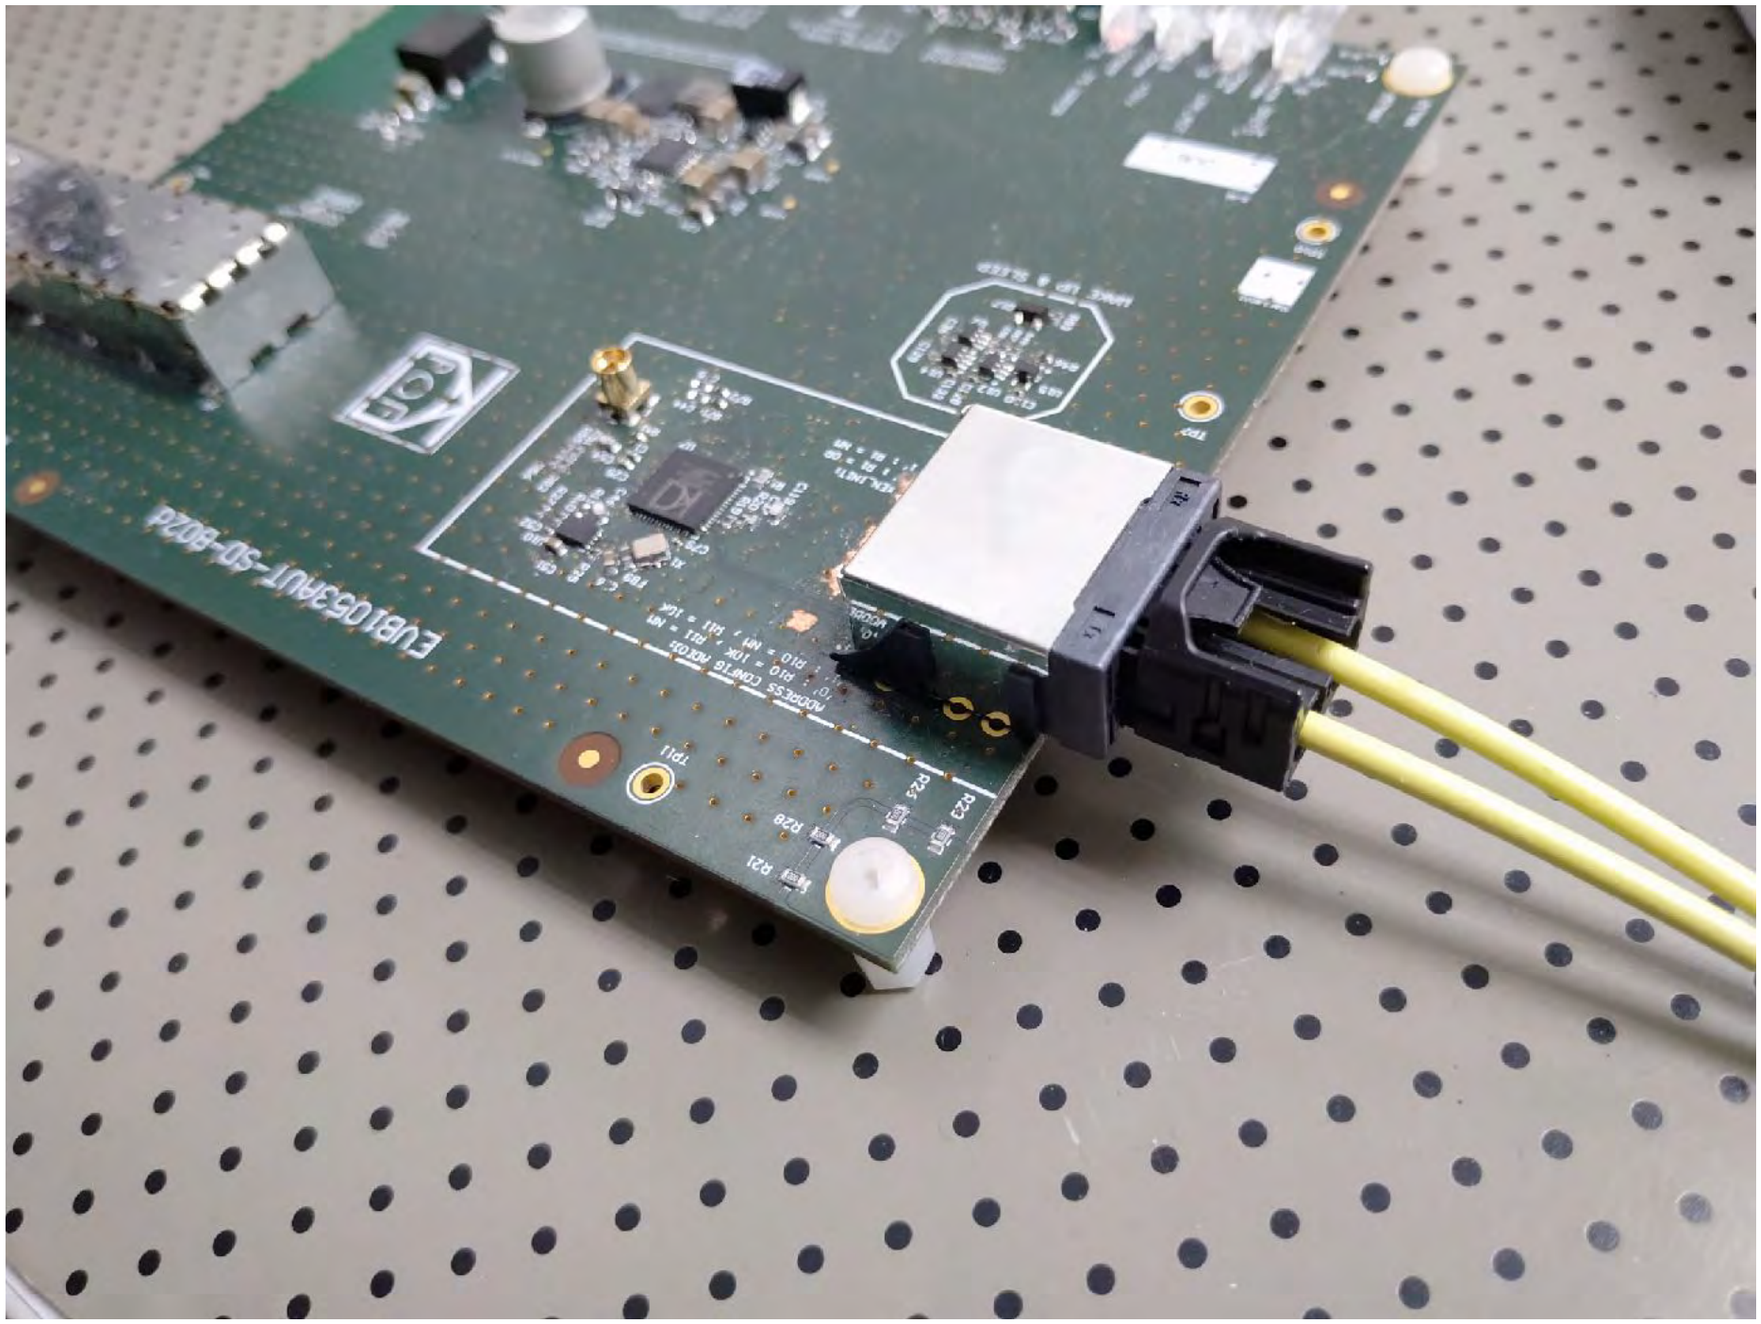
"… optical network solution greatly improves the speed of automotive networks and moves beyond obsolete, lagging networking protocols. Optical Ethernet technology is ideal for future in-vehicle network infrastructure, since it provides a radiation-free harness, and thus meets prerequisites concerning electromagnetic compatibility (EMC). Higher speeds are achieved by wider use of the electromagnetic spectrum, which forces OEMs to impose more and more stringent emissions limits on electronic components."

Martin Hiller, Volvo Cars

" … m*any factors come into play here, such as costs, the degree of maturity of the components and so on. Ethernet via fiber optics is definitely of interest. …"*

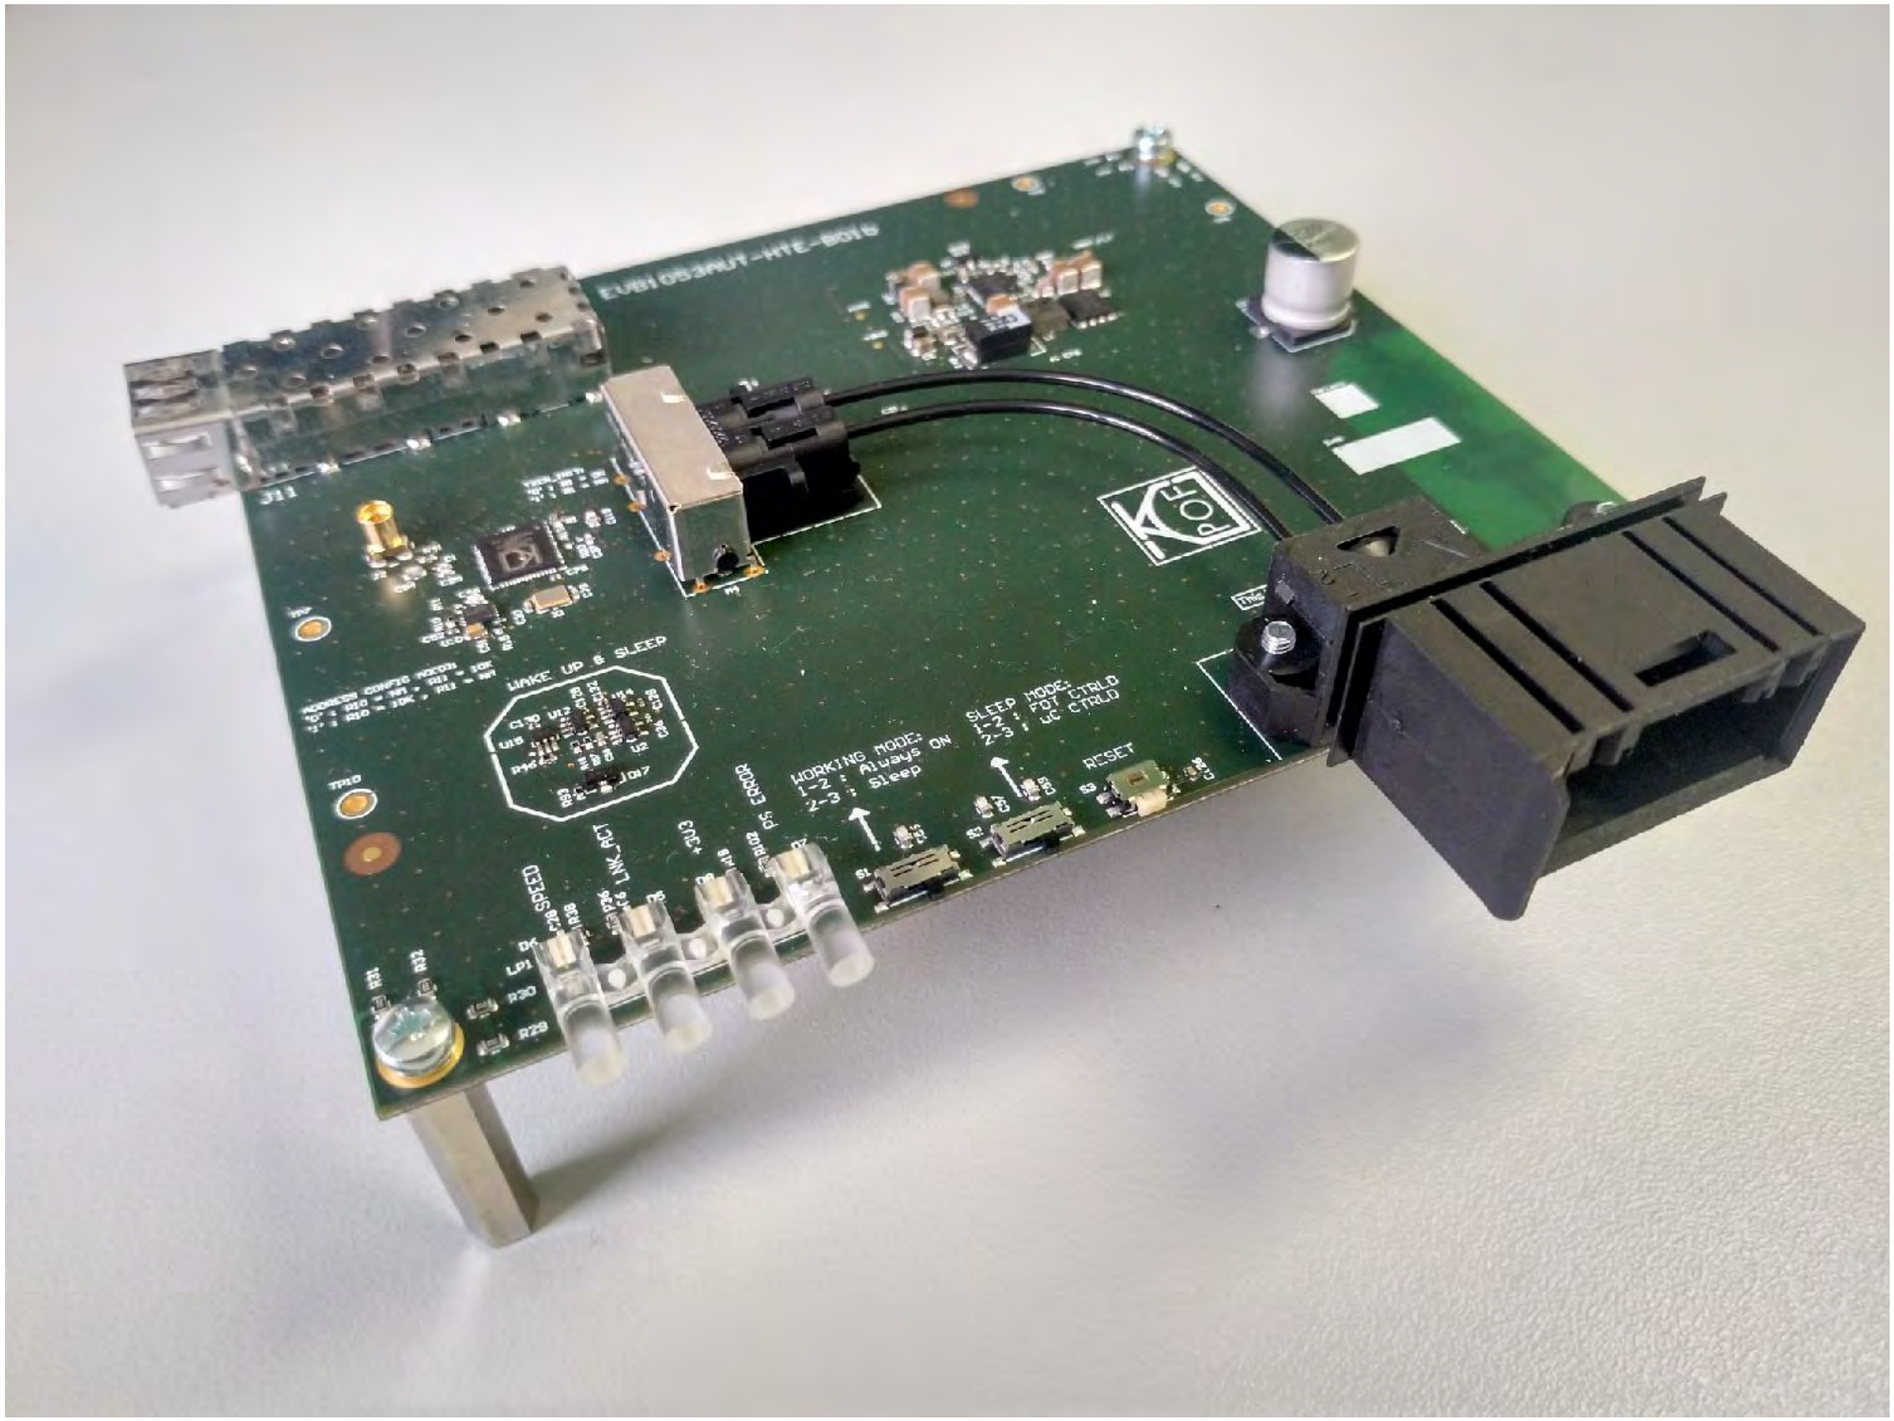
Automotive Optical Ethernet Connector

- How does it look like ?



Automotive Optical Ethernet Connector

- How does it look like ?



Automotive Optical Ethernet Connector

- How does it look like ?

Automotive Optical Ethernet Harness

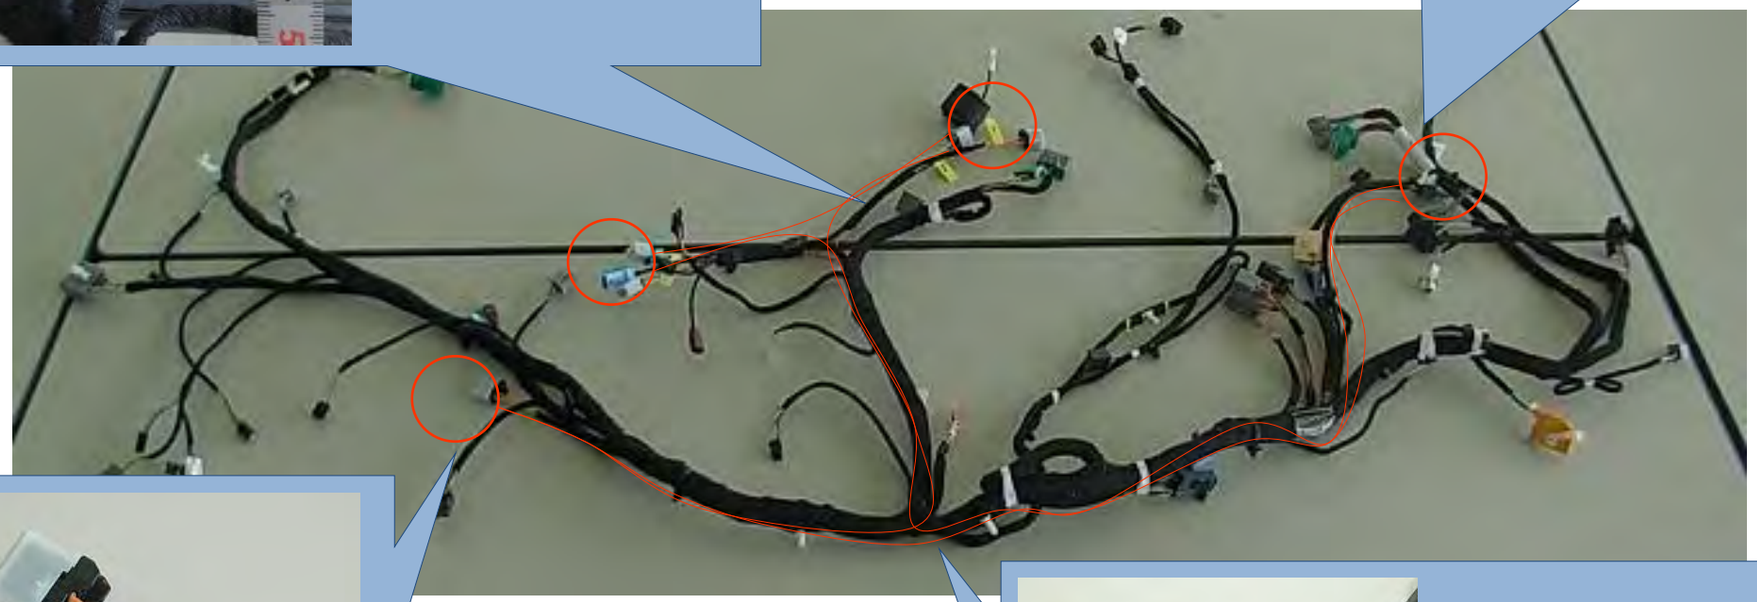
Seamless integration of POF with W/H at manufacturing and installation

- How is installed ?

Instrument Panel W/H

Bundling Optical Harness to Separation （Keeping R15mm）

Loopback (for Diagnostics) Connector with Clamp



Dust Protection Cap to all Connector Ends

○Optical Connector End
—Routing

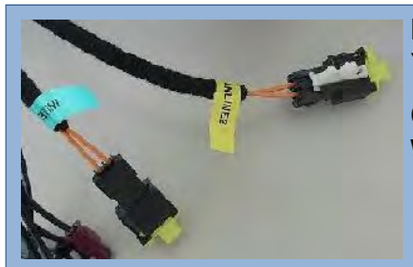
Bundling Optical Harness to Copper Binding

Automotive Optical Ethernet Harness

- How is installed ?

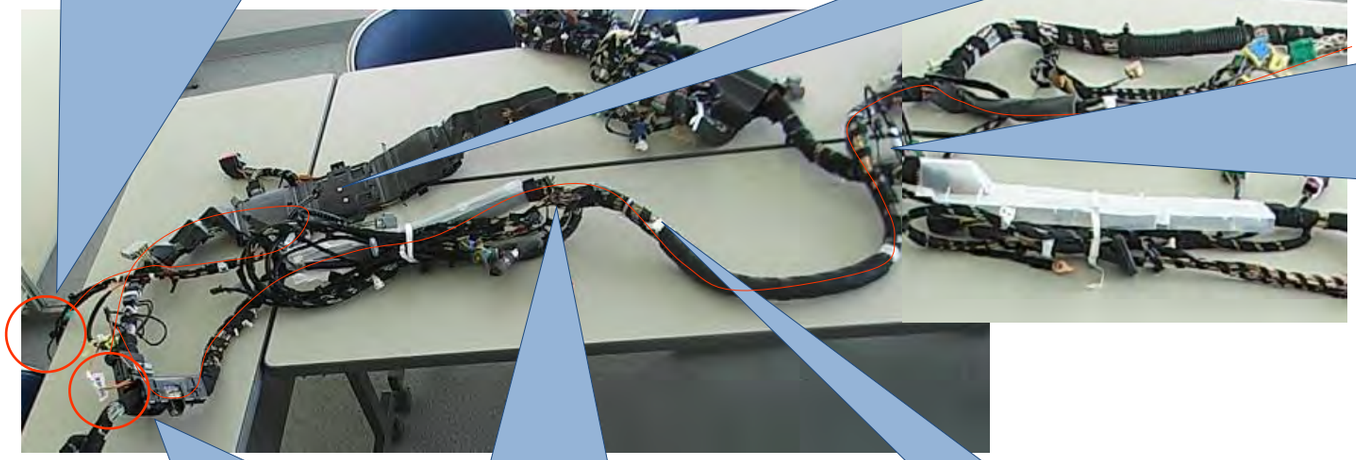
Floor W/H

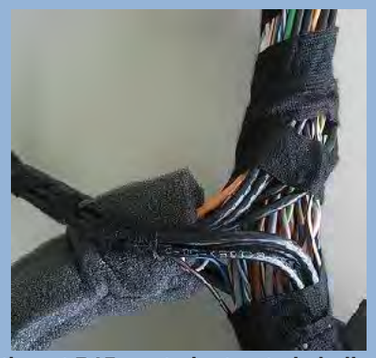
Seamless integration of POF with W/H at manufacturing and installation



Inline Connector
Yellow：Dust Protection Cap
White：Clamp

No Protection for Optical Fiber inside Protector

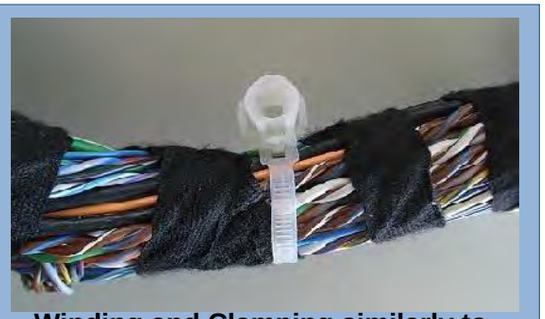




Separation at R15mm to be treated similarly to Copper Cable

Fixing Inline Connector to Protector

Protector Exit ; Similarly treated to Copper Cable



Winding and Clamping similarly to Copper Cable

GM Poll

Surveys – OEM Responses

Cable Types – Should different speeds use the same cable or is it okay if they're different?

- 68.75% of respondents said it is okay to use different cables for different speeds

Is it okay to use optical cable?

- 50% of respondents said they would consider using optical cable

Maximum operating temperature

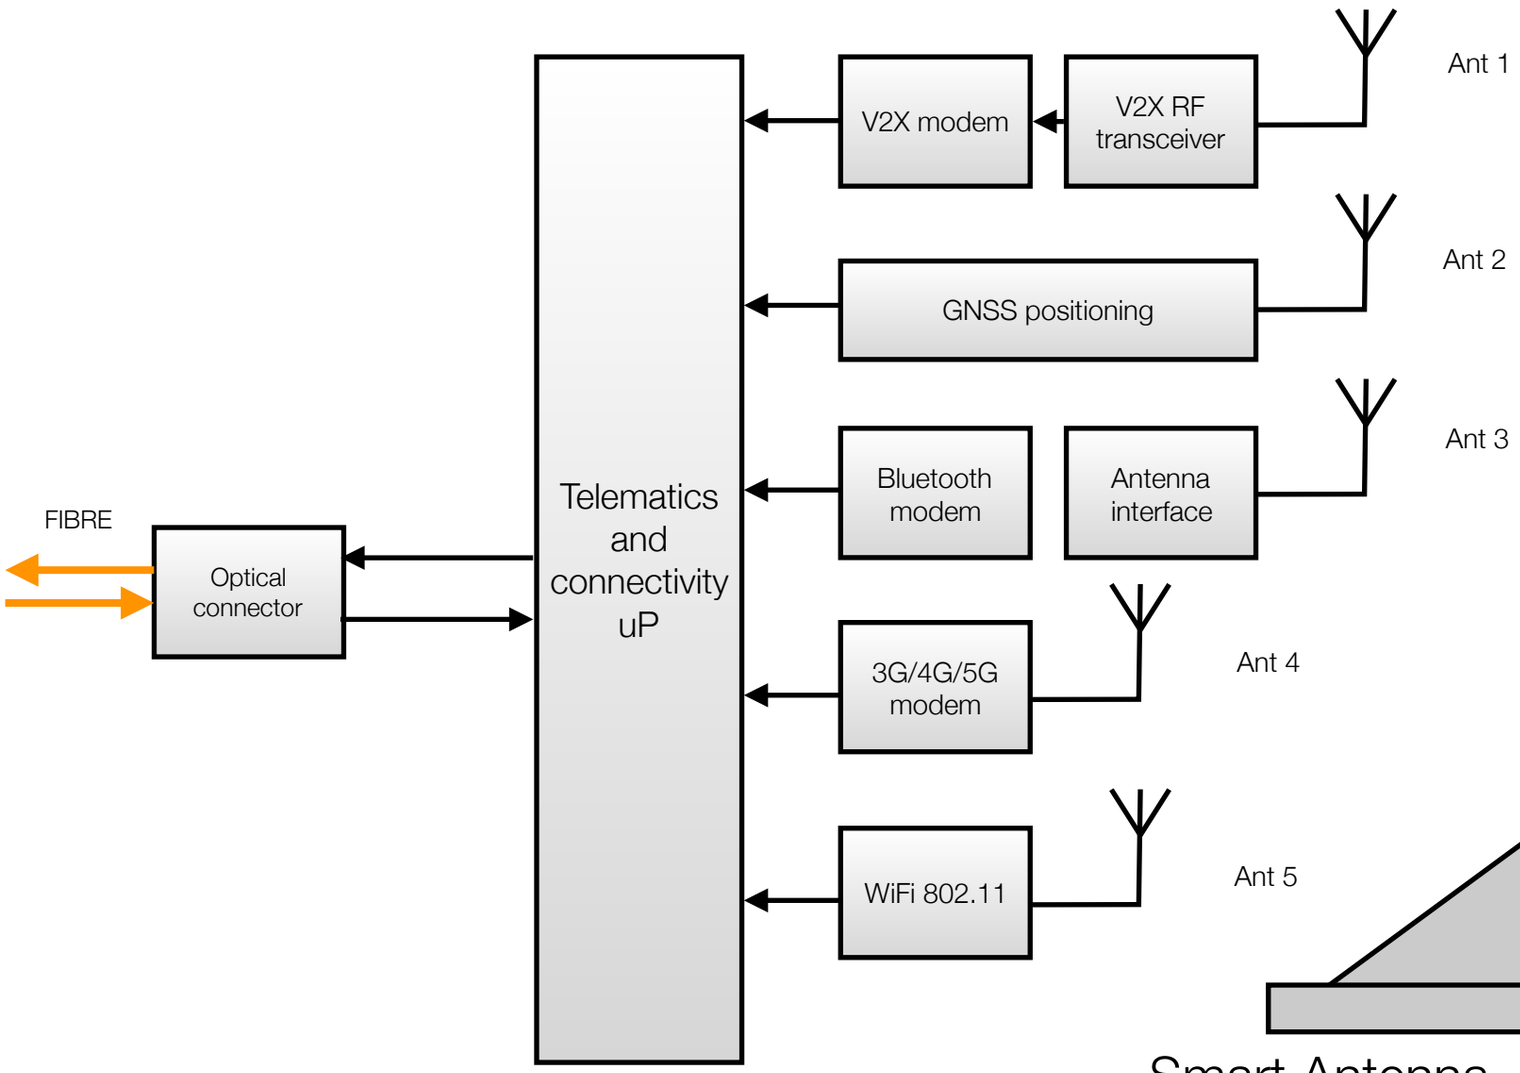
- 62.5% need 105 C for most or all speeds
- 18.75% need more than 105 C for some or all speeds
- 18.75% say 85 C is sufficient for all speeds

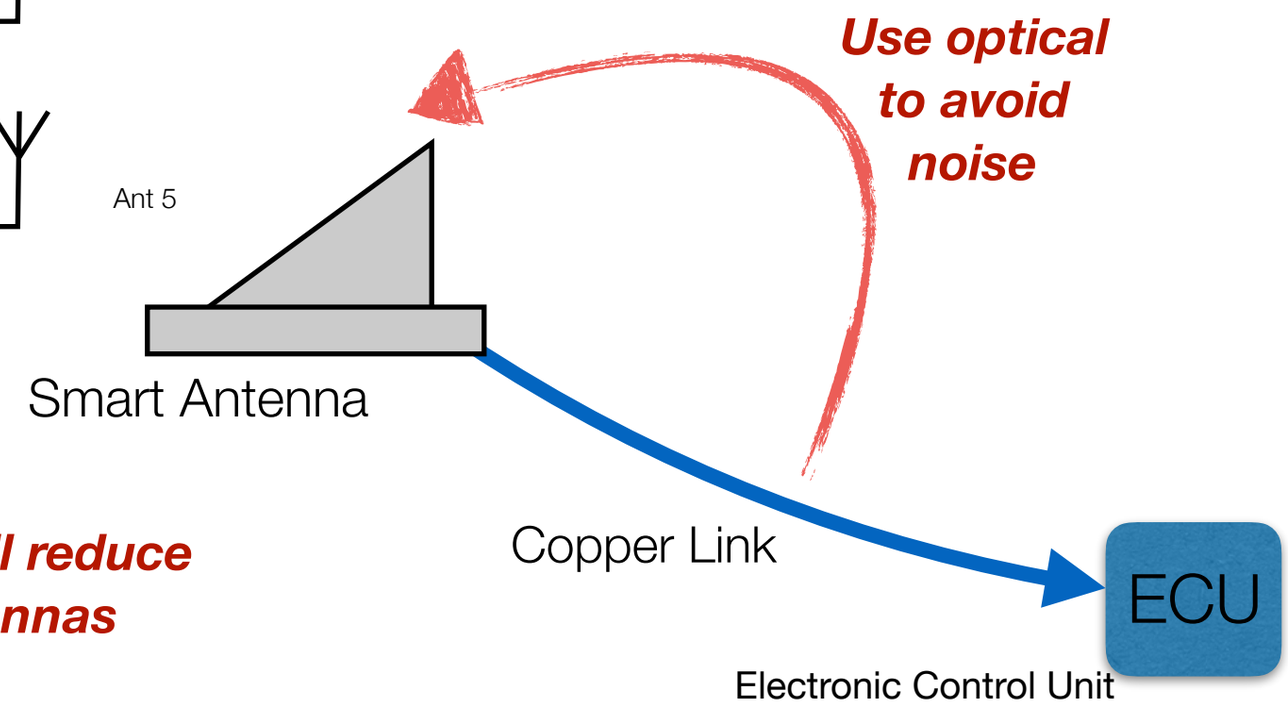
Minimum operating temperature

- 100% agree that -40 C is sufficient
- -55 C is required for storage

Use cases
Why optical?

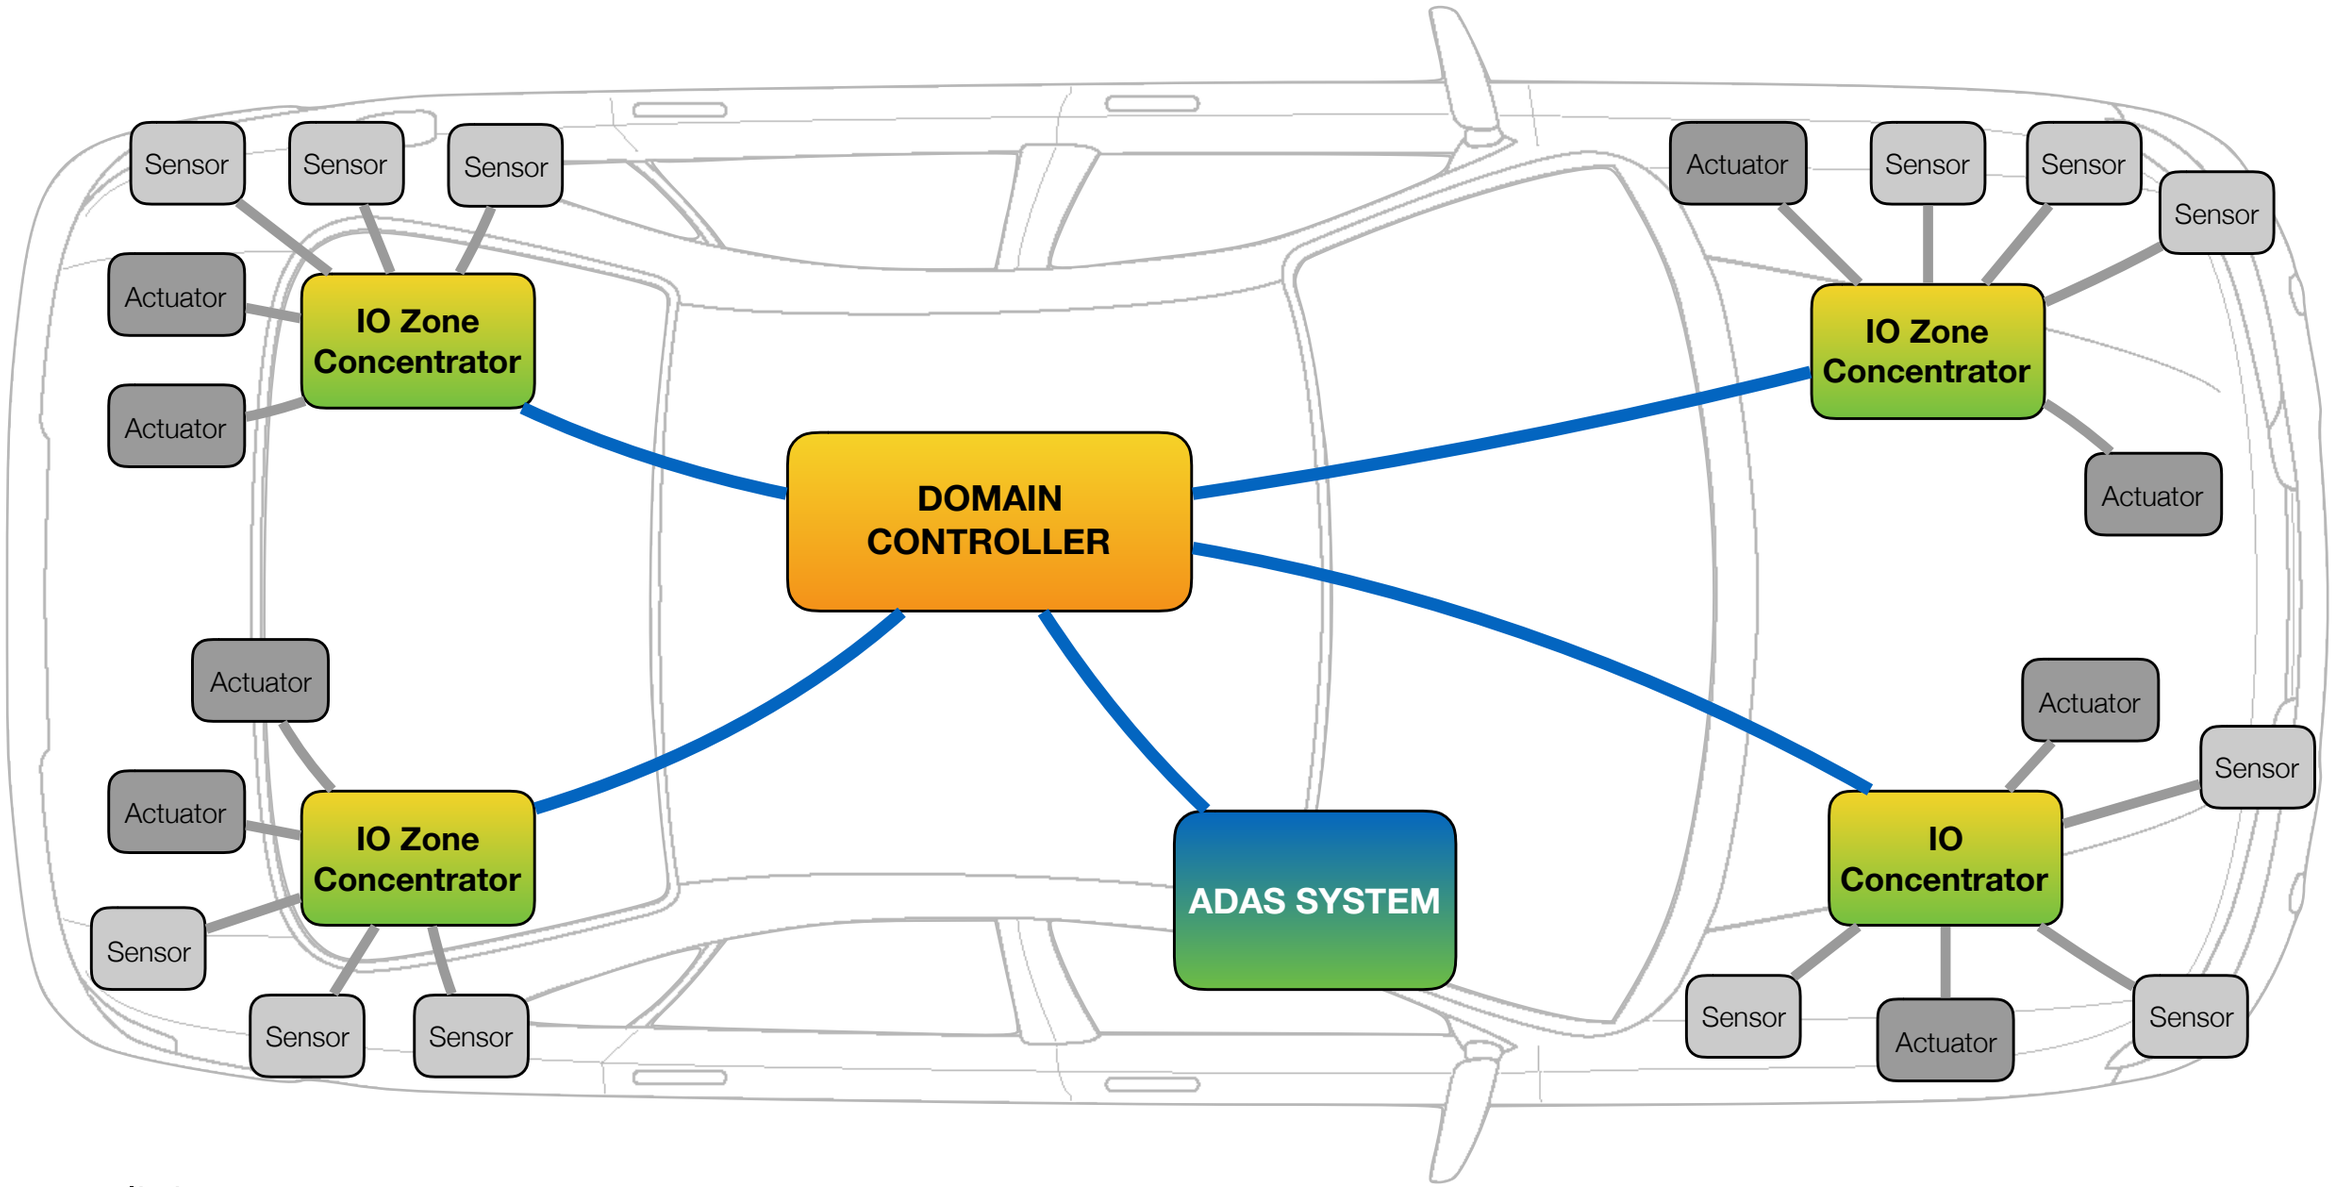
- Smart Antenna





Any small radiation from the copper link will reduce the reception dynamic range of the antennas

Use cases
Why optical?



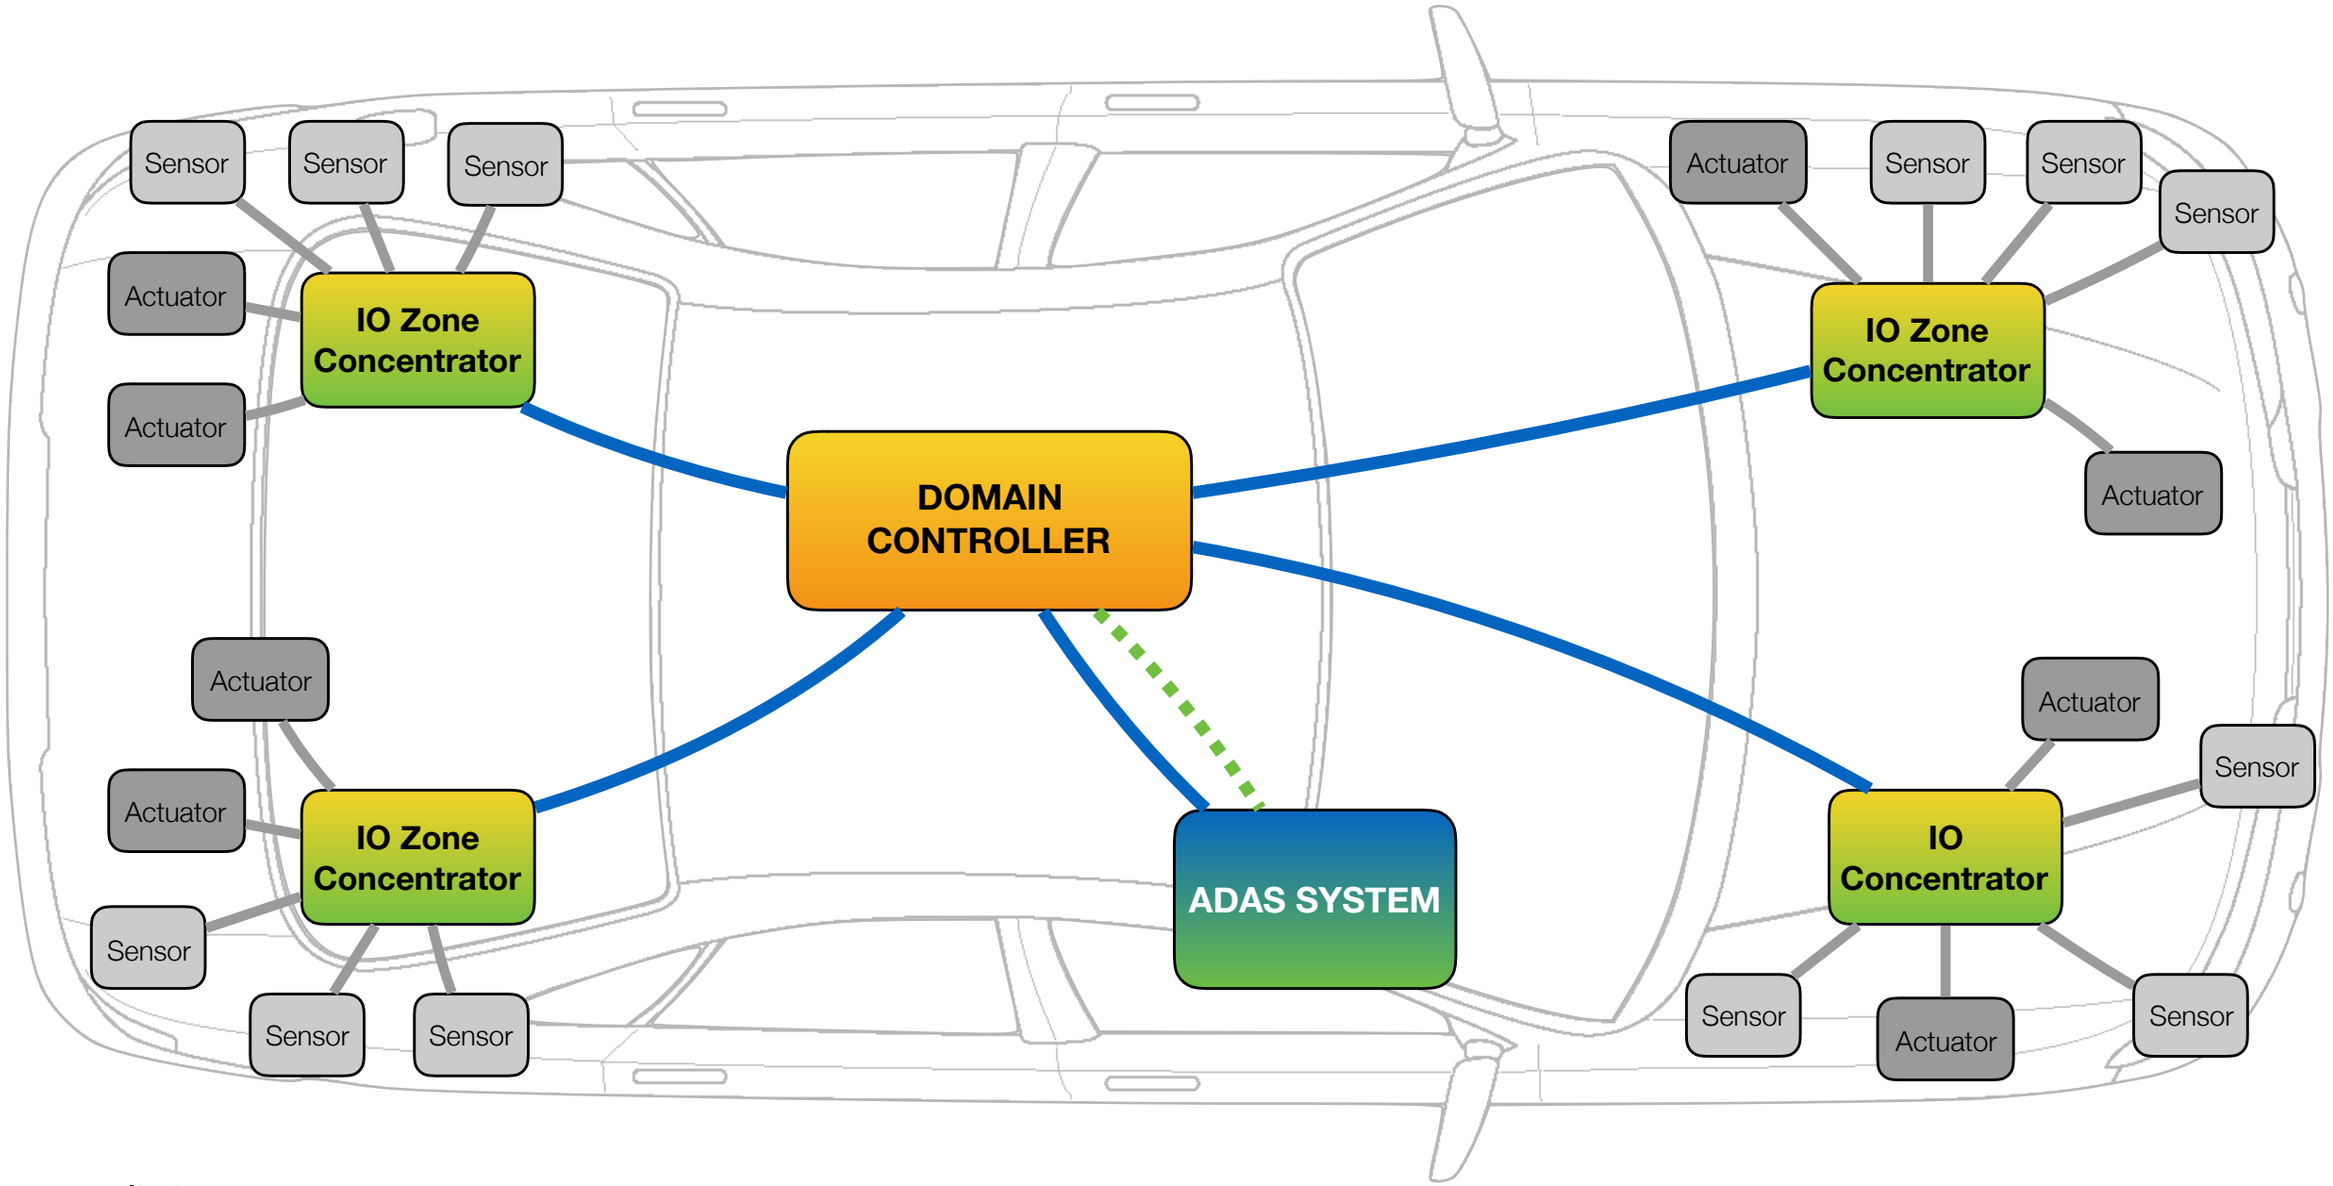
Local zone link

ASIL-B link

ADAS=Advanced Driver Assistance System

Use cases
Why optical?

Save backbone with redundant links will be needed for ASIL-D architectures.



Local zone link

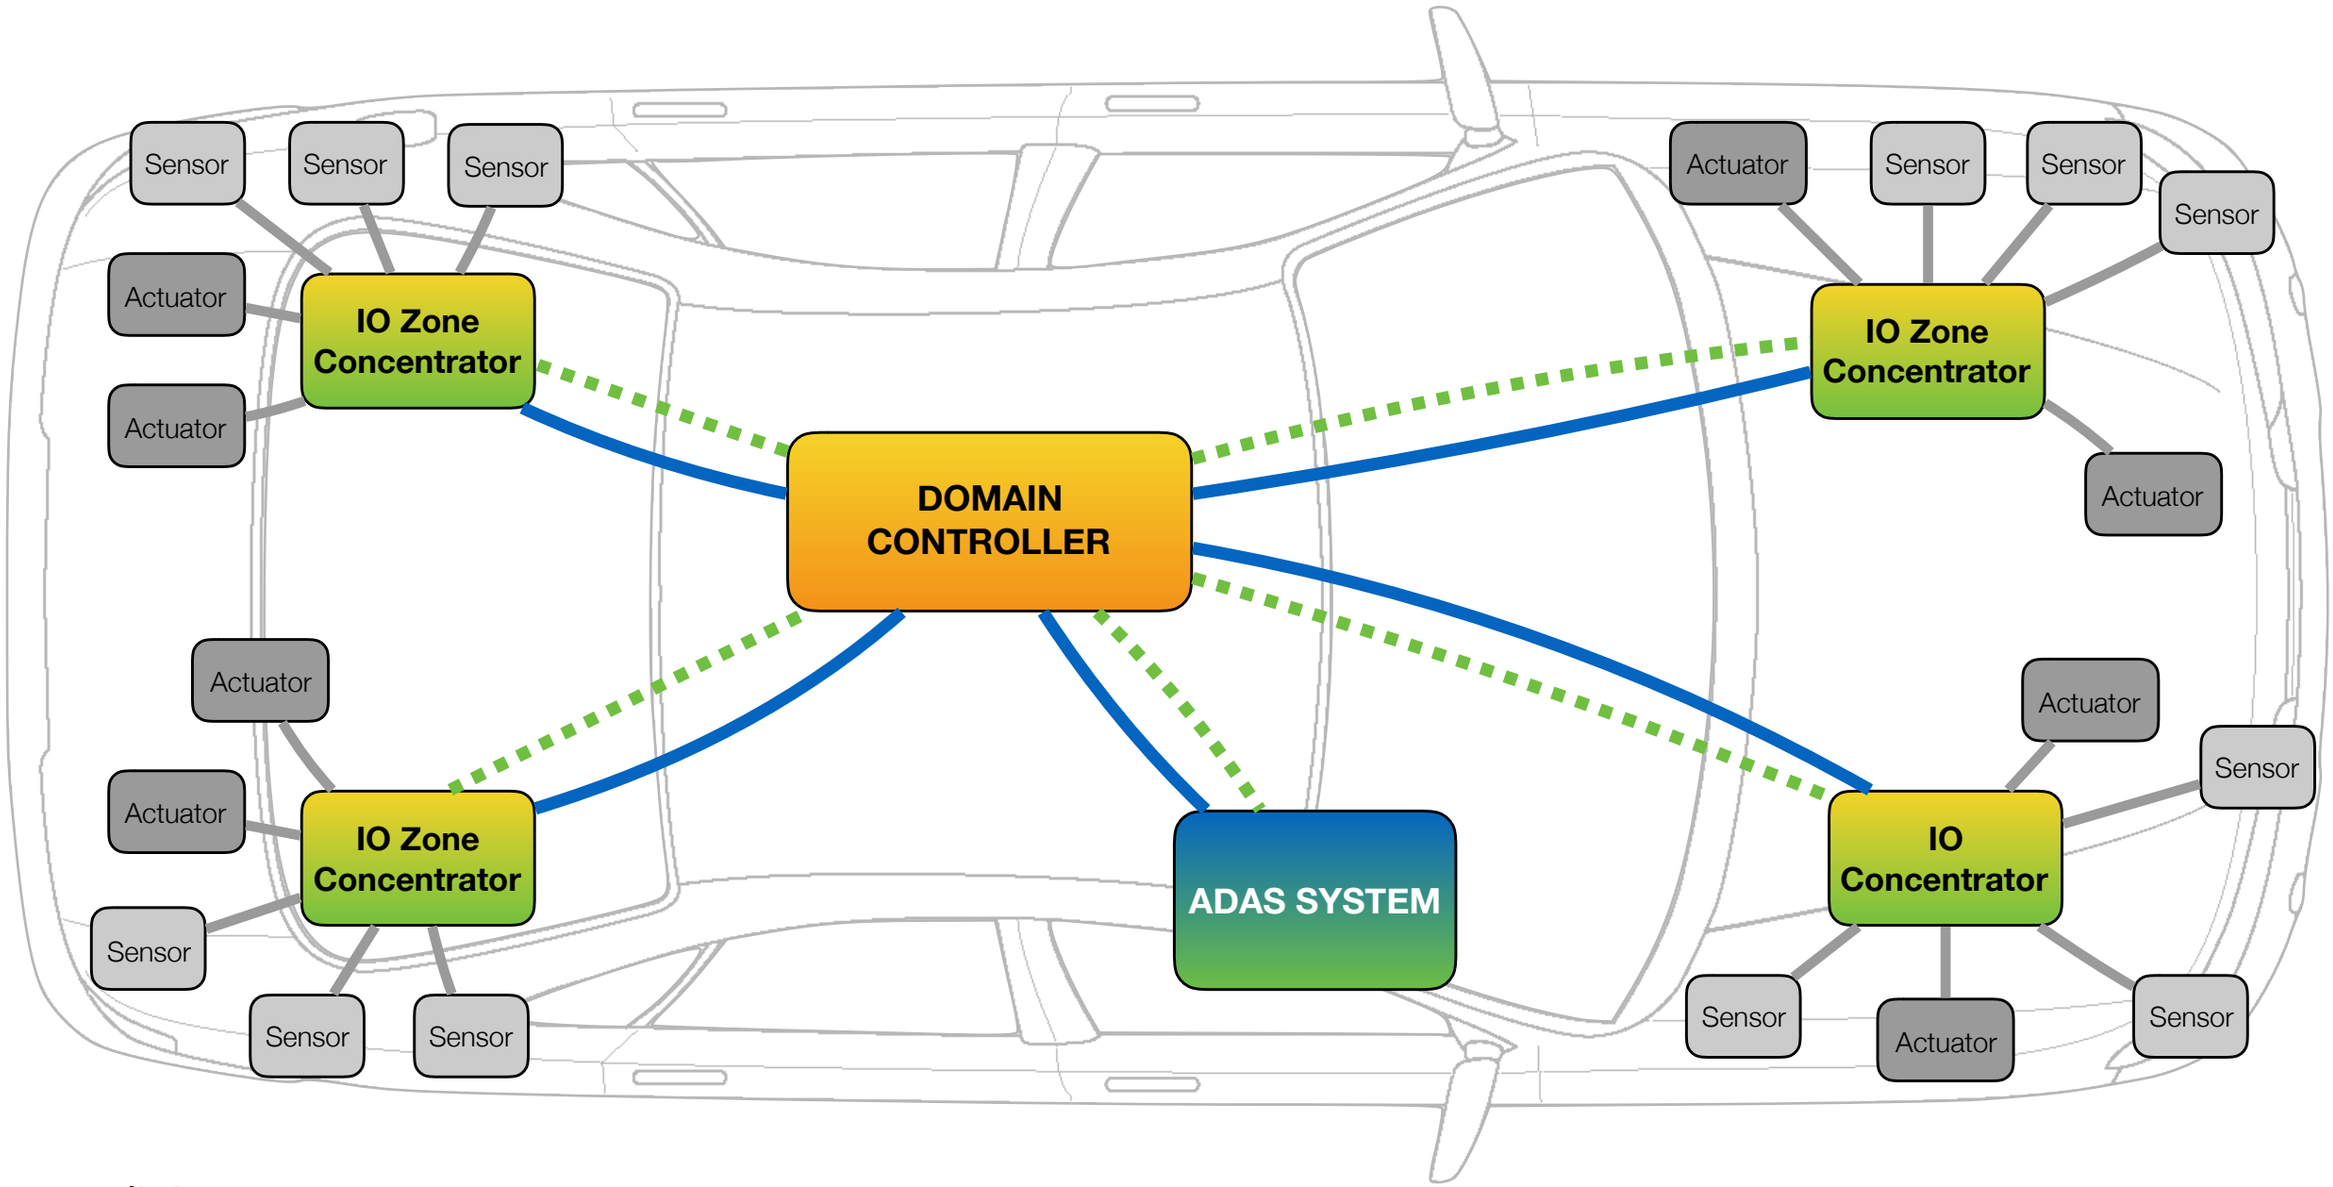
ASIL-D Safety architecture
ASIL-D = ASIL-B + ASIL-B

Redundant ASIL-B link
ASIL-B link

ASIL=Automotive Safety Integrity Level

Use cases
Why optical?

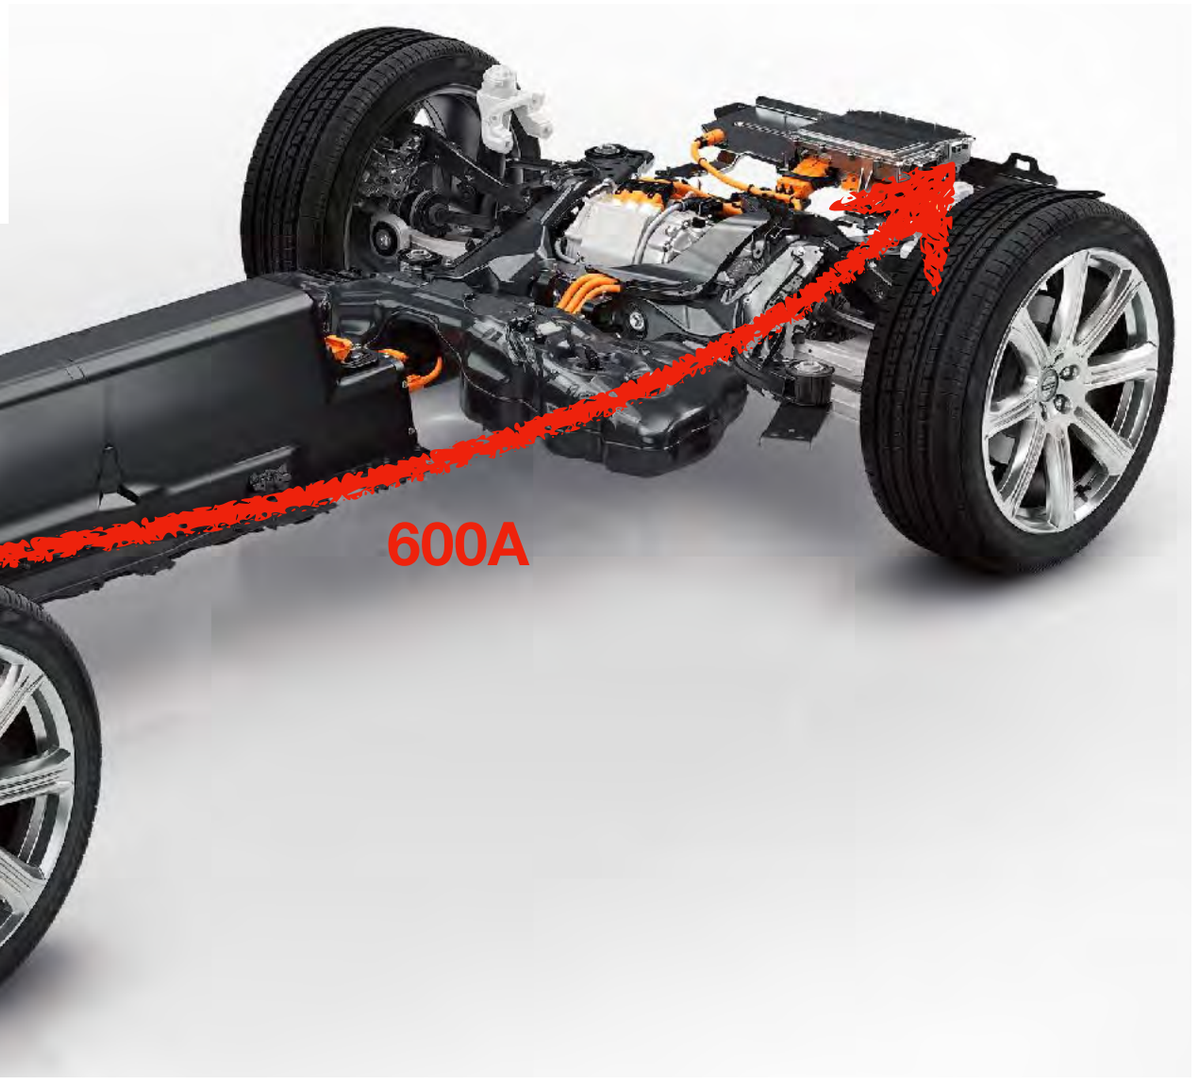
Save backbone with redundant links will be needed for ASIL-D architectures.



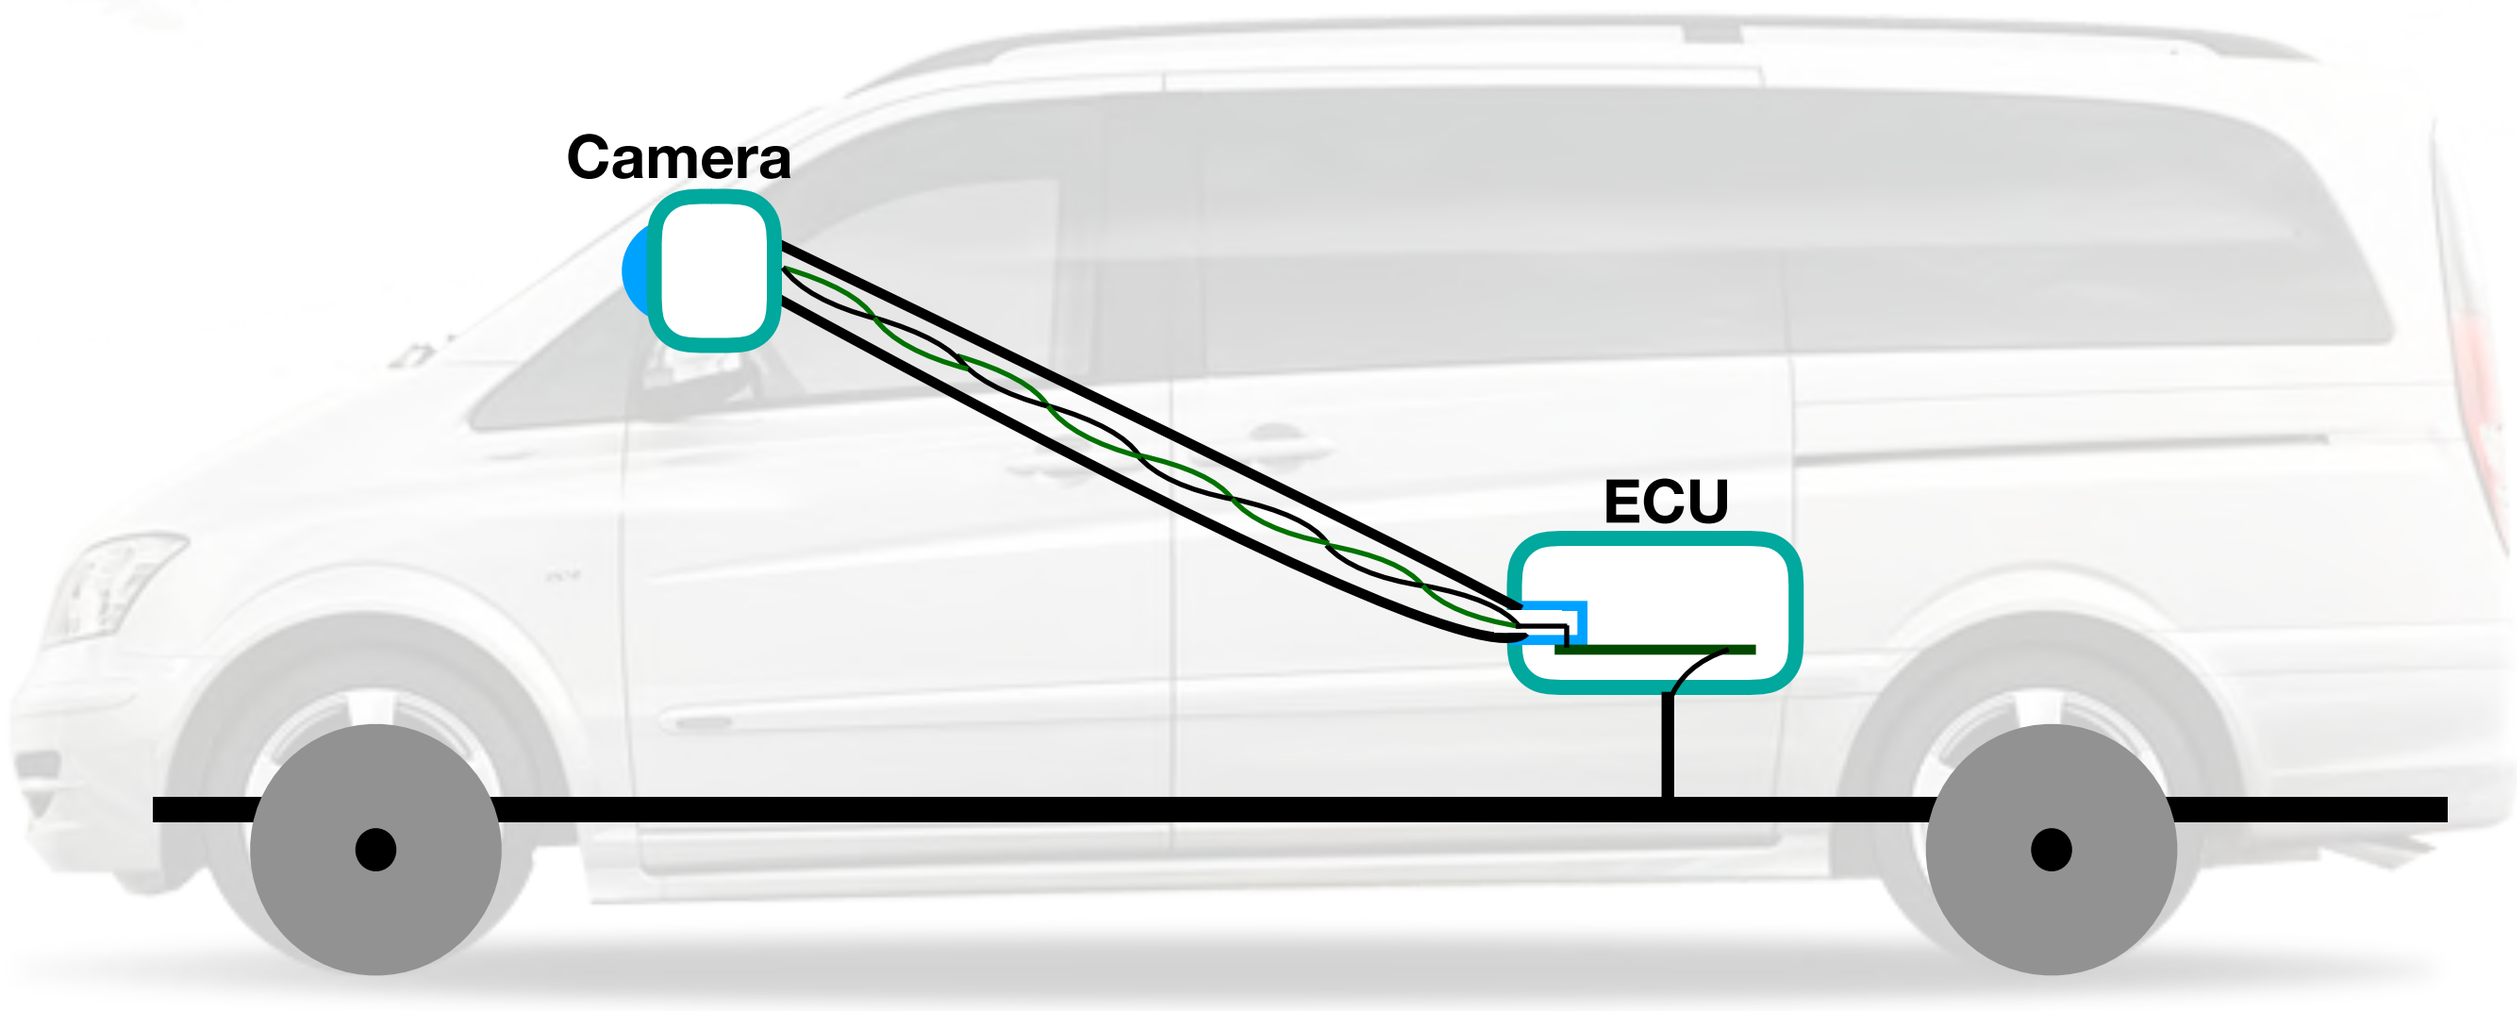
ASIL=Automotive Safety Integrity Level

Use cases
Why optical?

During operation, currents up to 600 A moves from the front to the back of the car.
It generates voltage drops between different ECUs of the car.
These voltages create up to 6A current flows going throw the shield of the data cables.

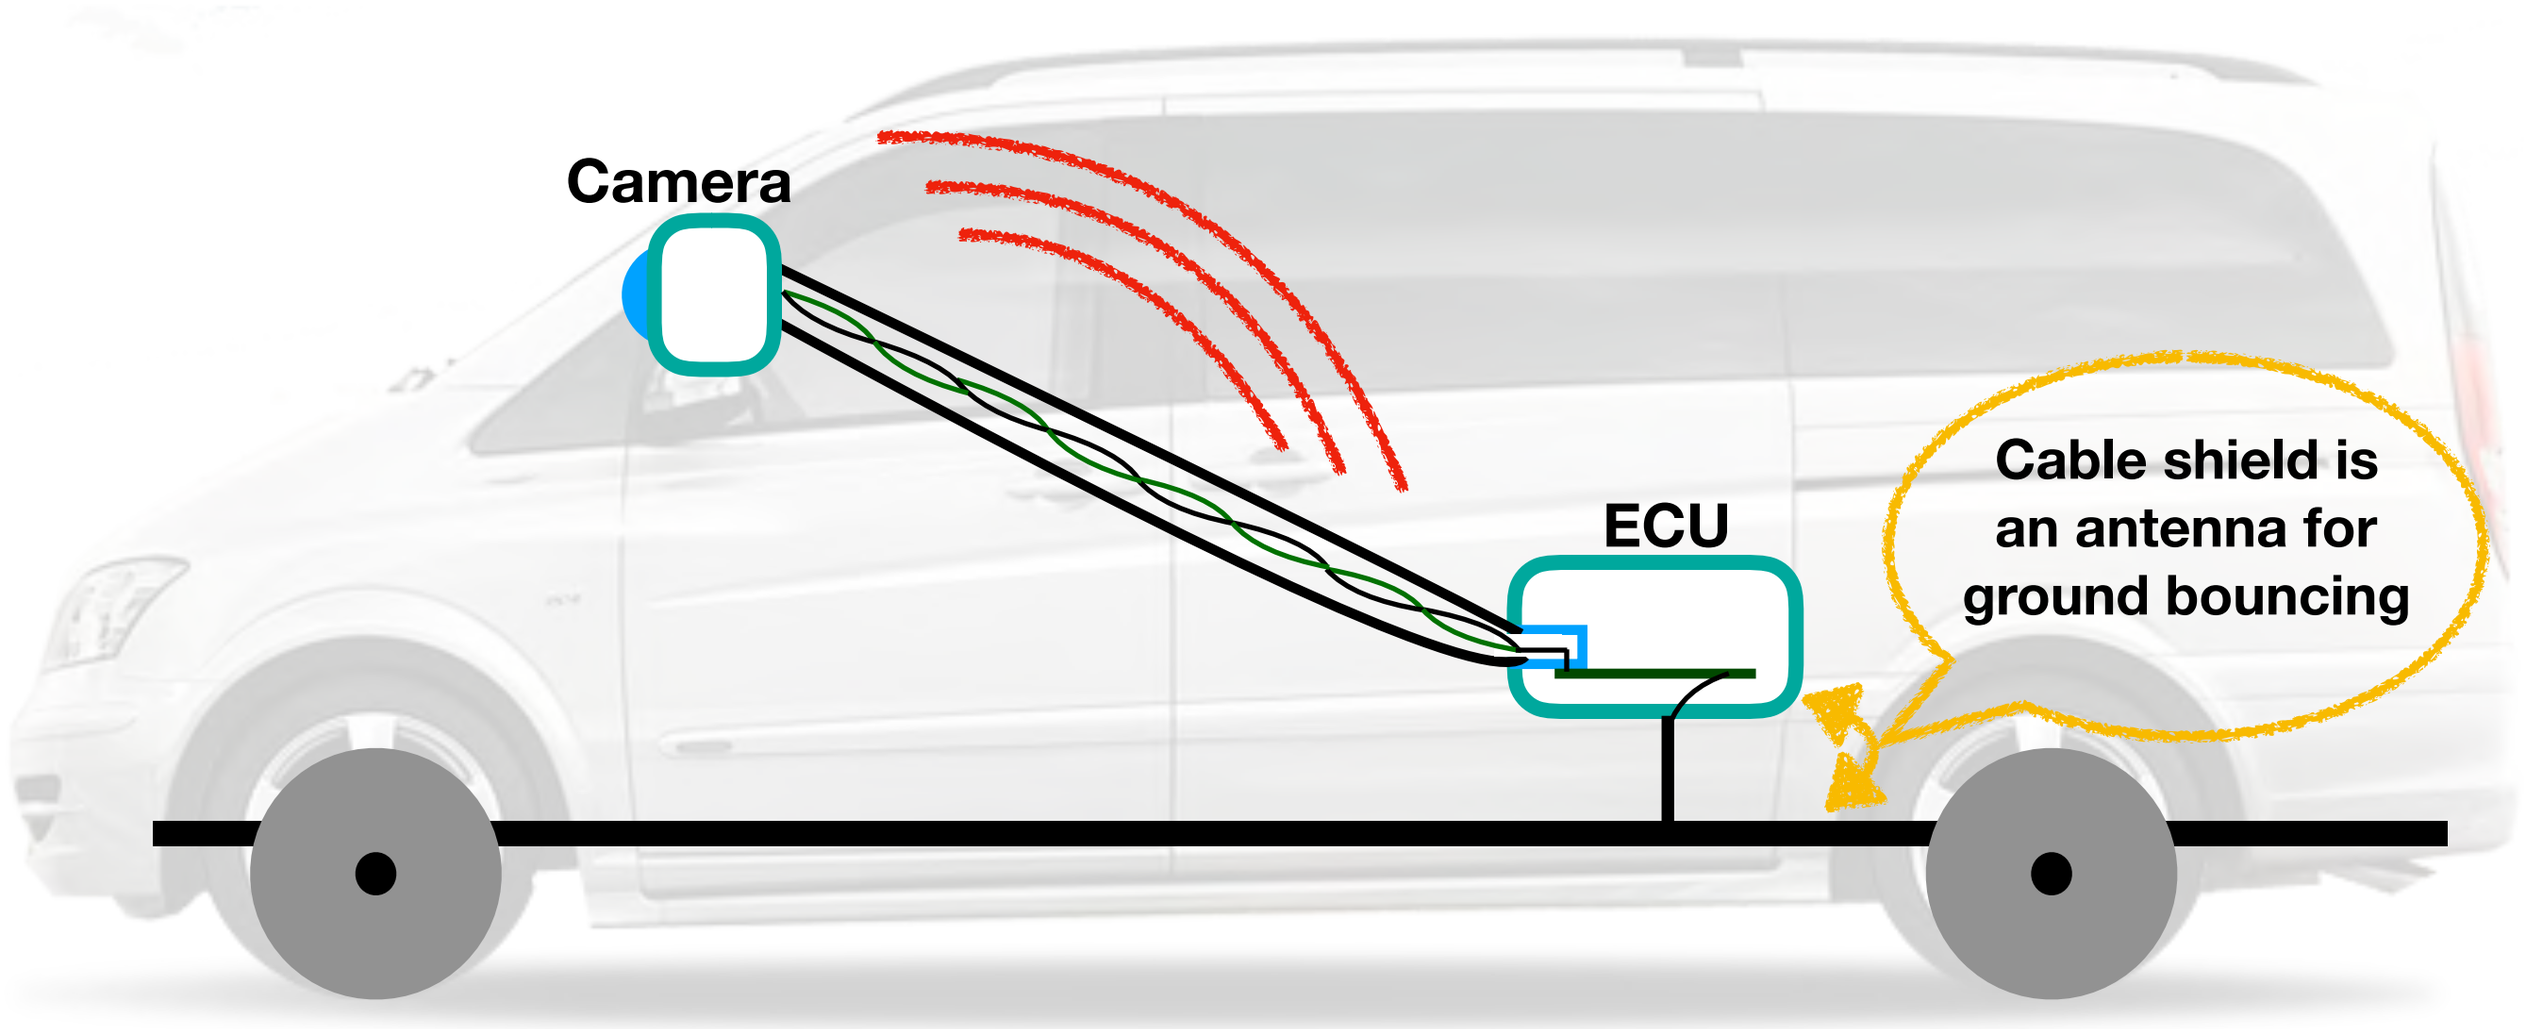


How shielded copper cables radiate?



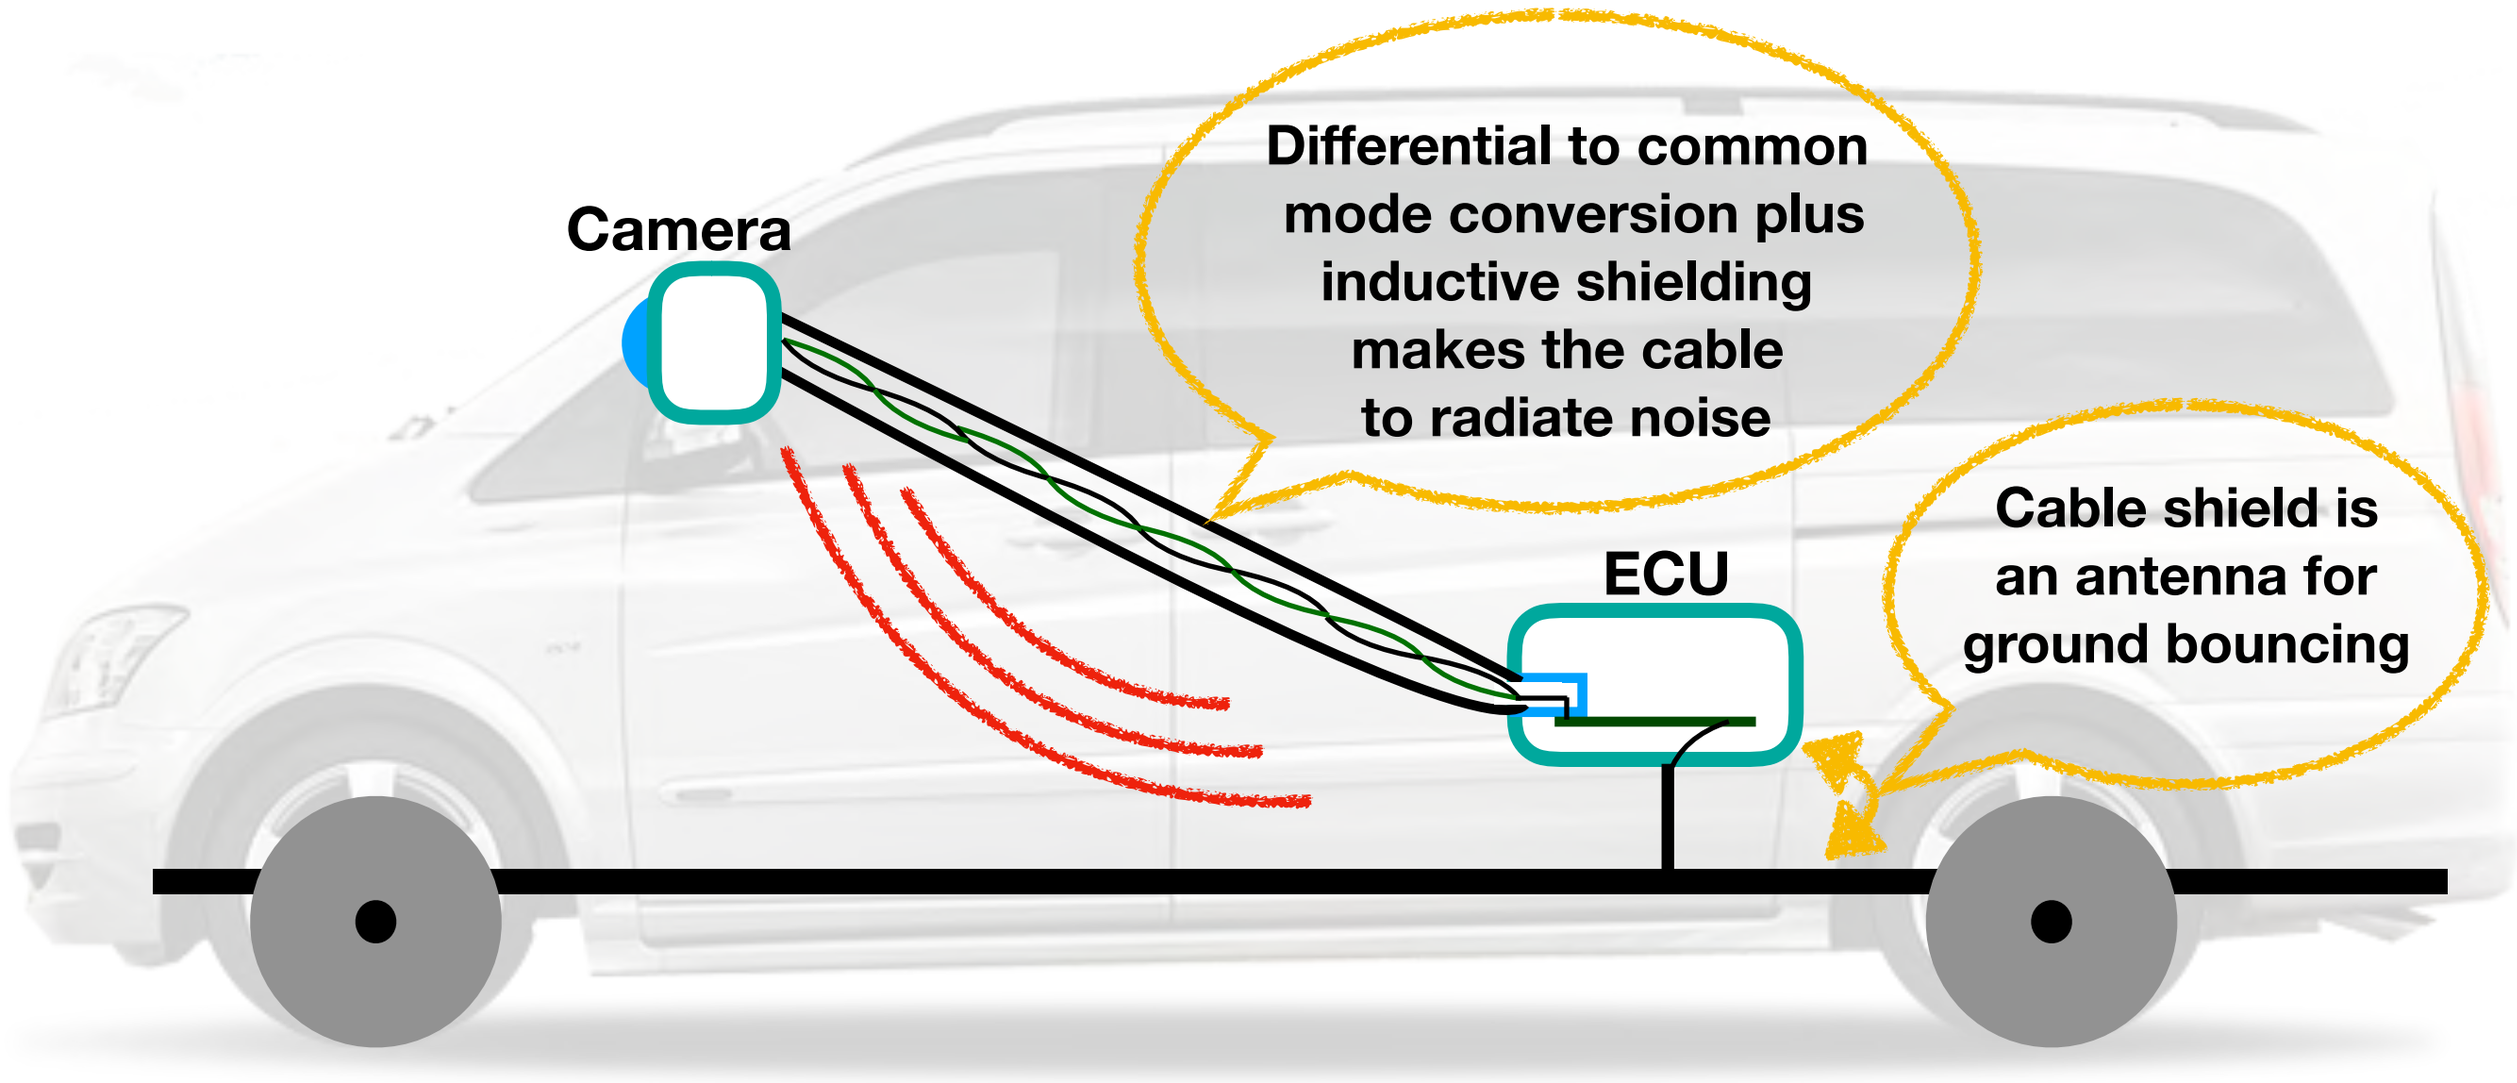
How shielded copper cables radiate?

- Shield is an antenna for any ground bouncing noise of the ECU (E field)



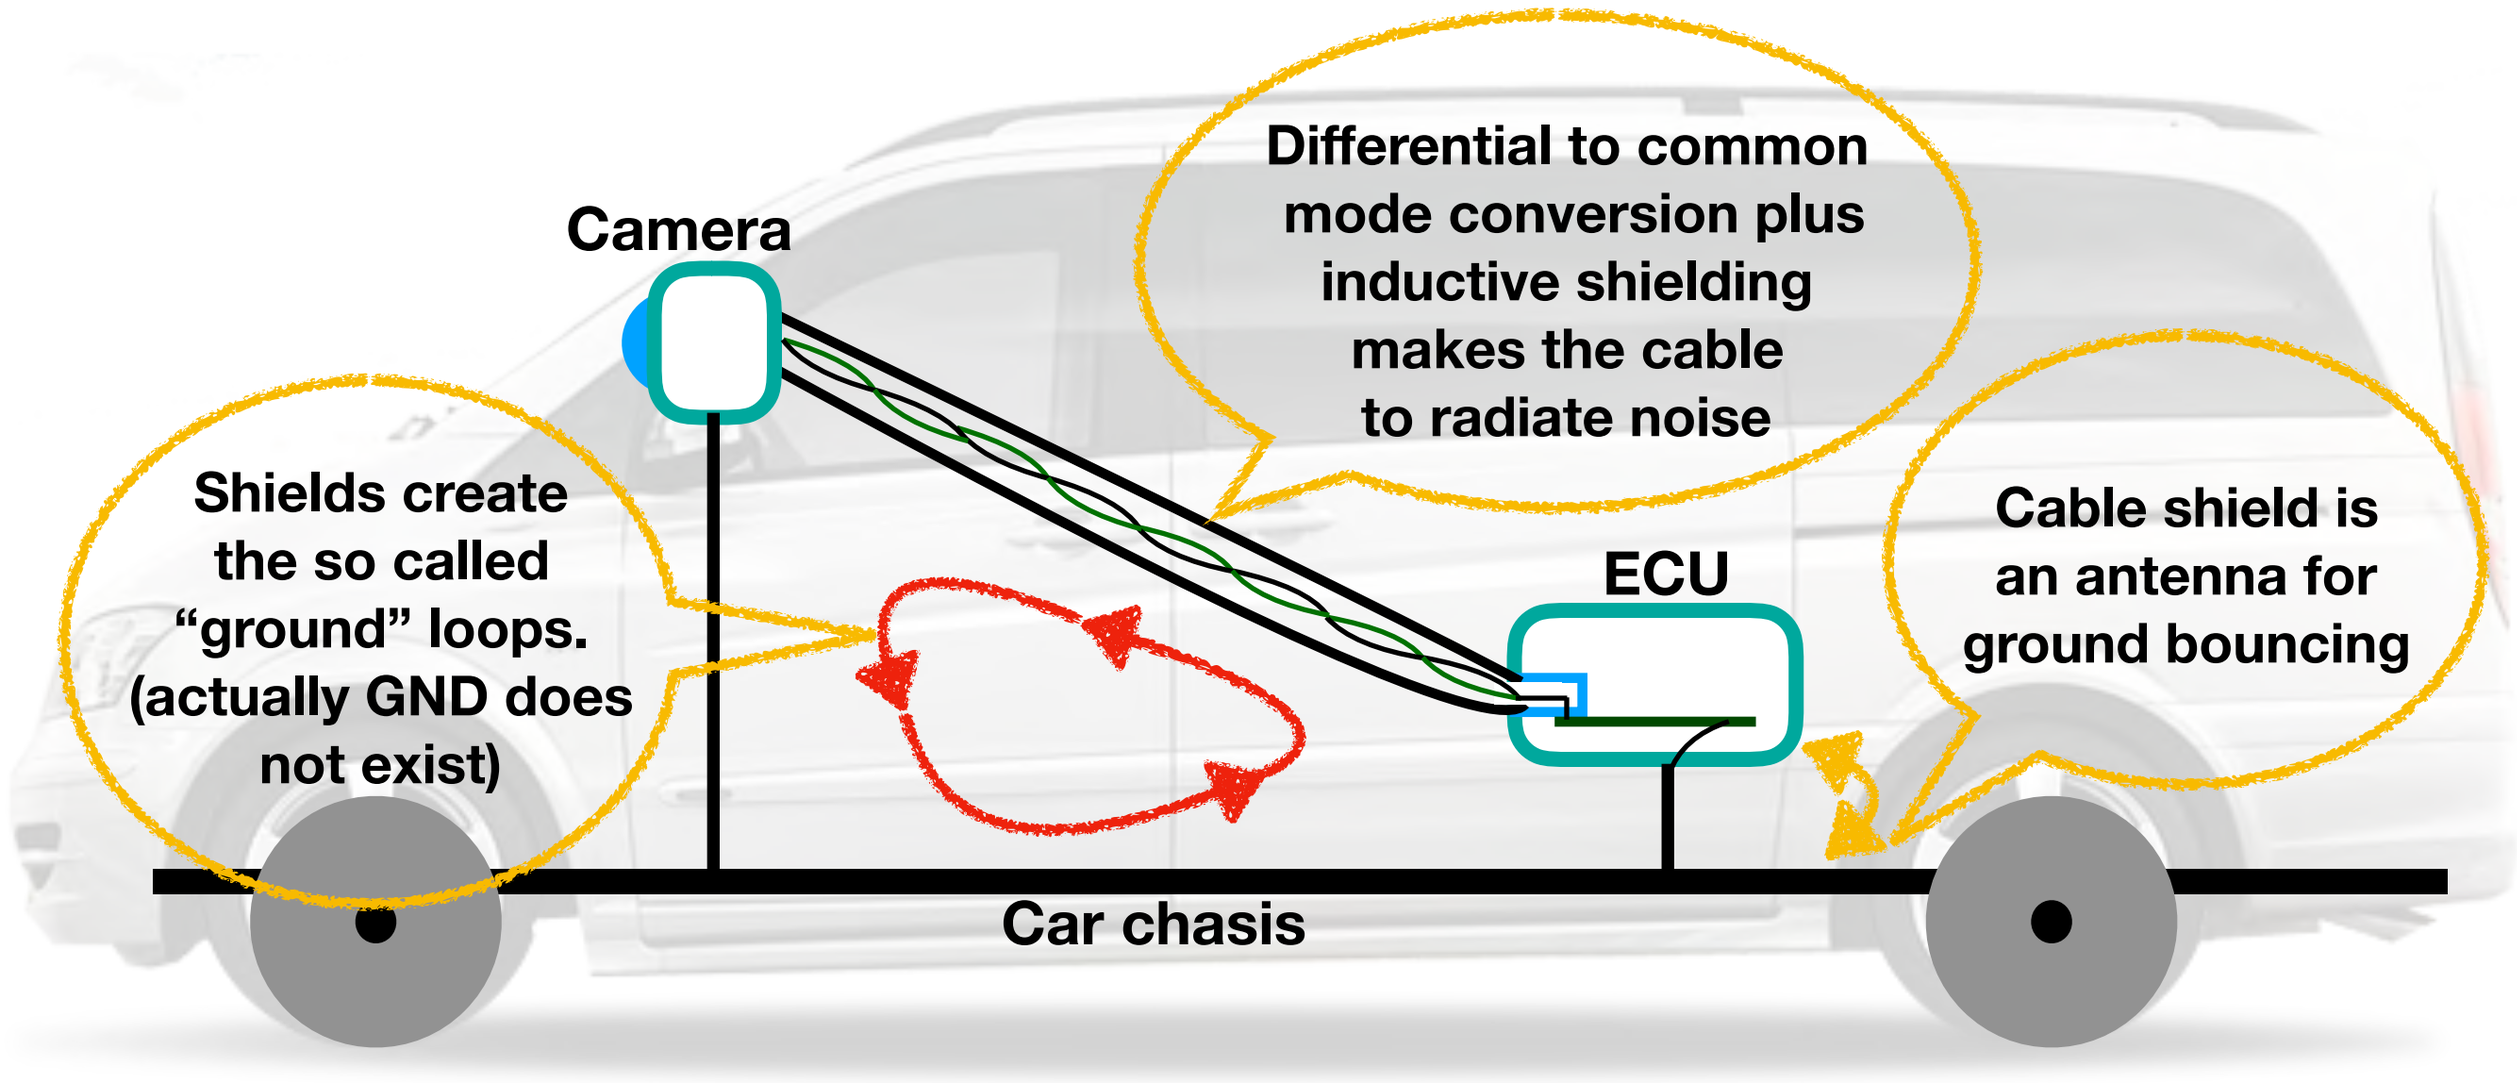
How shielded copper cables radiate?

- Shield is an antenna for any ground bouncing noise of the ECU (E field)
- Common mode conversion plus inductive shielding generates currents and voltages in the shield, radiating noise as an antenna



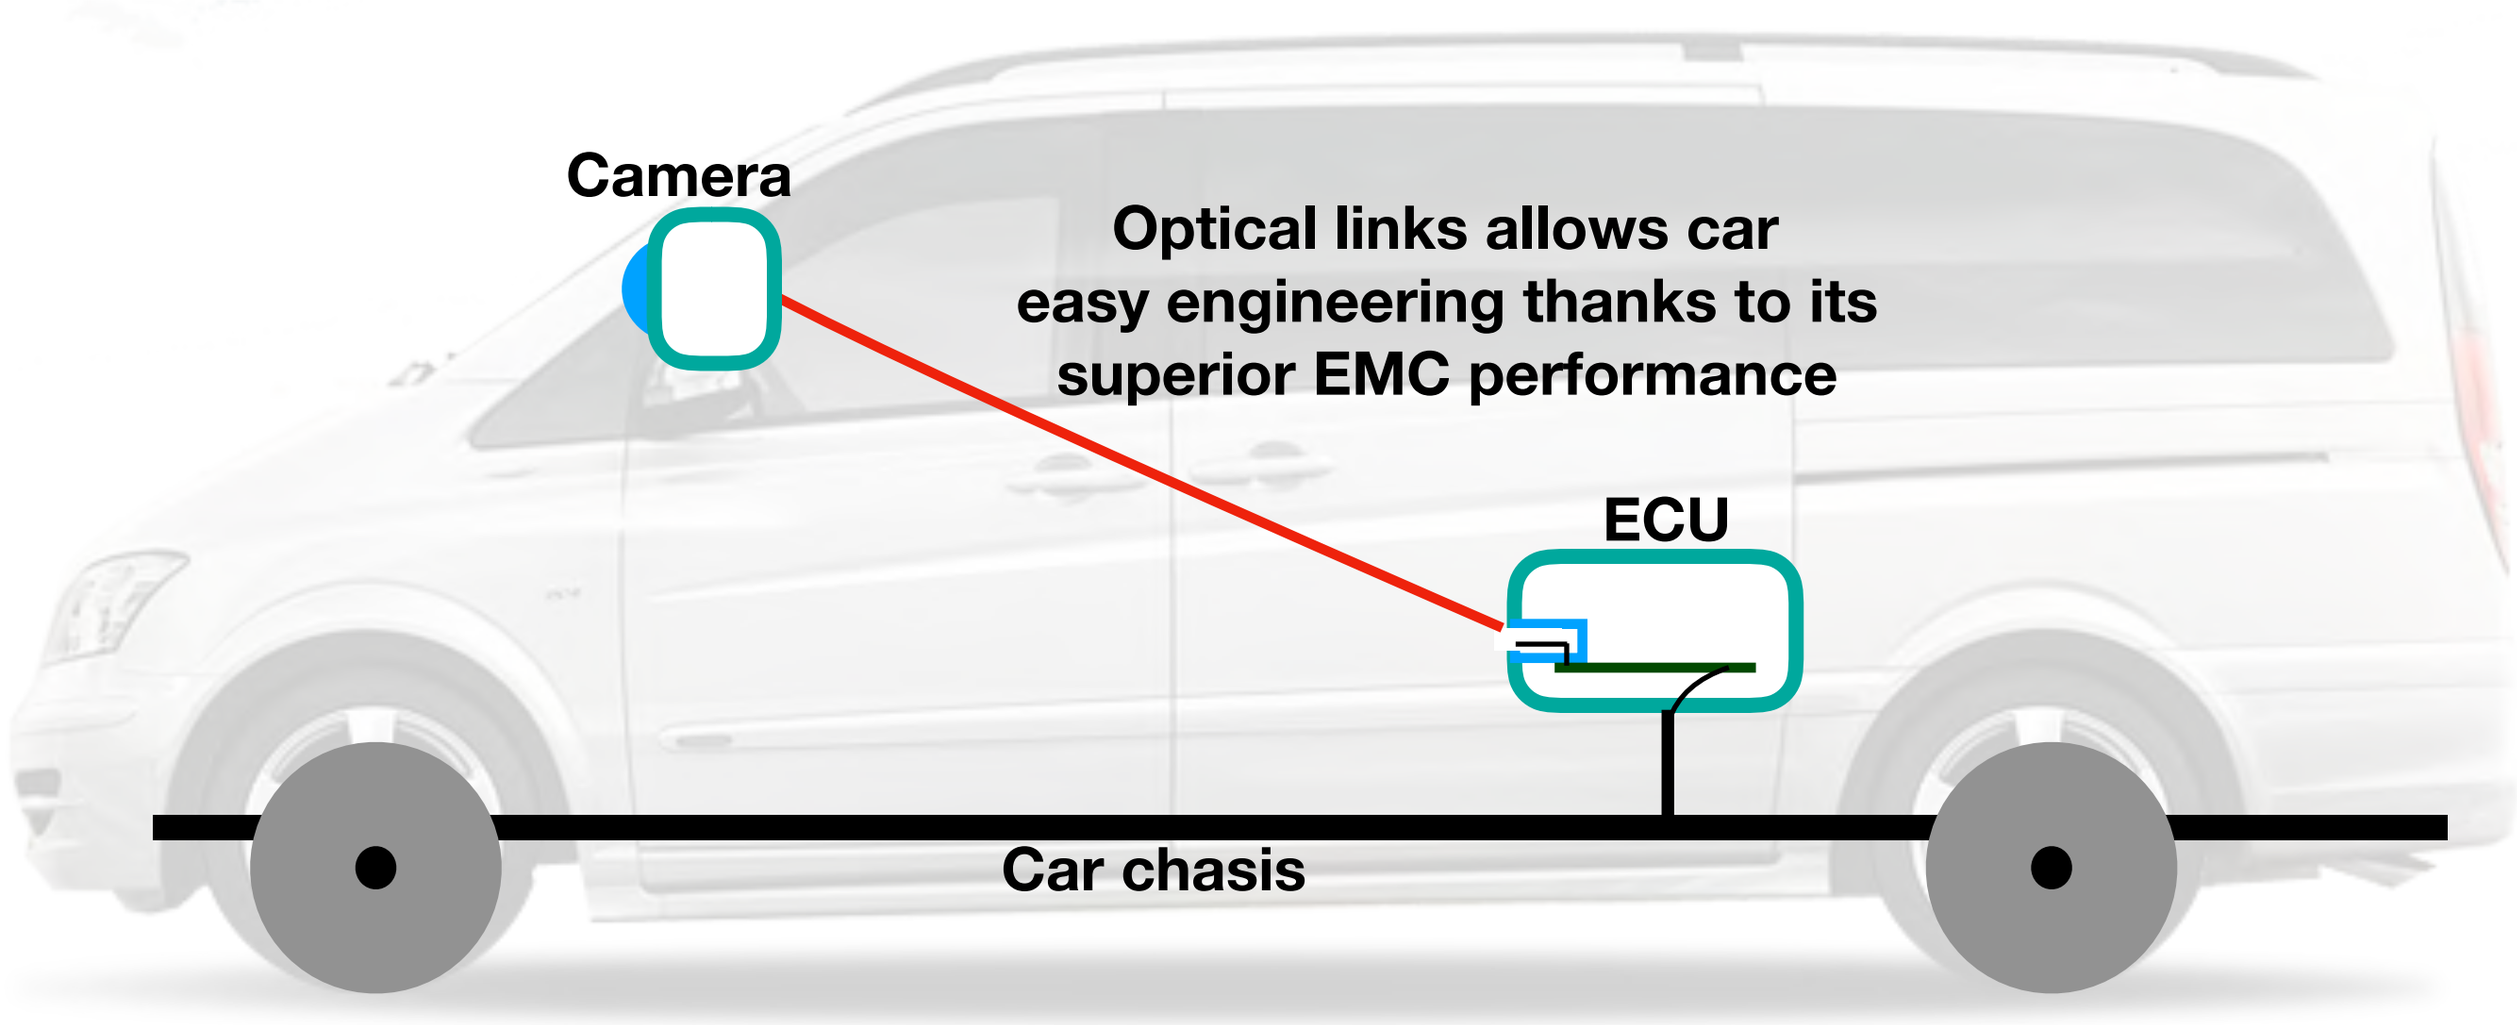
How shielded copper cables radiate?

- Shield is an antenna for any ground bouncing noise of the ECU (E field)
- Common mode conversion plus inductive shielding generates currents and voltages in the shield, radiating noise as an antenna
- Cable (inductive) shielding is a root cause of uncontrolled current loops (H field): conductive noise is converted into radiative facilitated by cable layout



How shielded copper cables radiate?

- Shield is an antenna for any ground bouncing noise of the ECU (E field)
- Common mode conversion plus inductive shielding generates currents and voltages in the shield, radiating noise as an antenna
- Cable (inductive) shielding is a root cause of uncontrolled current loops (H field): conductive noise is converted into radiative facilitated by cable layout



Market Drivers
Optical multi-gig use cases

- Provided by OEMs specialists:

	2.5 Gbps	5 Gbps	10 Gbps	25 Gbps	50 Gbps	Unidirectional
Backbone	✓	✓	✓			
Smart Antenna	✓					
Cameras, Sensors	✓	✓	✓			✓
Display	✓	✓				✓
Future				✓	✓	

Can an Existing Optical Ethernet Types be Used?

- IEEE Std 802.3 already includes the 10GBASE-SR specification that may be considered as starting point to develop multi-gigabit optical solution for automotive applications.
  - However, is it really good enough for automotive applications?

- We need to examine each components in the optical link:
  - Fibres / cables
  - Connectors
  - Light sources
  - Photo Diodes

10GBASE-SR

- 10GBASE-SR was not designed to meet automotive requirements:
  - Automotive temperature range: Tj = -40ºC -> 105ºC/125ºC and more than 15 years of operation with close to 0 ppm failures

- 10GBASE-SR has no specified temperature range
  - 10GBASE-SR VCSEL designs doesn't meet automotive reliability and target temperature range
  - VCSEL current density will need to be reduced to meet automotive requirements
  - VCSEL bandwidth will be reduced due to current density reduction
  - Relative intensity noise will increase due to current density reduction

- Insertion Loss will be increased due to:
  - 4 inline connectors with much higher estimated losses per connector due to:
  - Vibration,
  - Aging,
  - Dust, etc.

- Cost and power consumption restrictions are different
- OAM channel is needed
- System needs to be adaptive to cope with:
  - dynamic changes of temperature
  - large parametric variation with manufacturing processes and temperature
  - low cost

Posible fibres

Nitto Plastic optical fiber target spec & launch schedule

Nitto
Innovation for Customers

Target spec

Term	Nitto POF
Feature	High speed Wide band width
Core/Clad	50um/250um
Wavelength	850nm
Band width(MHz.km)	≧750
Distance	<50m
Bending(R)	<2.5mm
Easy to use	○
Attenuation loss	<0.07dB/m
Noise	○(Optimized material structure)
Heat resistance(Tg)	105℃

*These will be our target value and would subject to change.

Launch schedule

2018

Dec — Pilot line installation

2019

Start sample shipment

2020

Volume production

Nitto will start Plastic Optical Fiber volume production for automotive industry before standardization would be finalized.

Posible fibres

Potential Glass Fibers for Automotive

200µm HCS Fiber with ETFE Buffer

Temperature: -65 °C to +125 °C
BW: ≥ 5 MHz-km @ 850 nm per IEC Standard
Attenuation: ≤ 6 dB/km @ 850 nm
Bend Radius: ≥ 16mm

GI HCS Fiber with ETFE Buffer

Temperature: -65 °C to +125 °C
BW: ≥ 400 MHz-km @ 850 nm (depending on core size)
Attenuation: ≤ 2.8 dB/km @ 850 nm (depending on core size)
Bend Radius: ≥ 16 mm

50/125 Standard GI Fiber

Temperature: -65 °C to +85 °C
BW: ≥ 4700 MHz-km @ 850 nm (depending on type and launch)
Attenuation: ≤ 2.2 dB/km @ 850 nm
Bend Radius: 17 mm

Market potential

Why now ?

- Demo cars are using 10GBASE-SR links in anticipation of a multi-gig Automotive Optical Ethernet standard.
- First car with multi-gig optical links is planned for 2025. OEMs are requesting a automotive qualified optical solution
- 1000BASE-RH already qualified and in production for 2020
- Industry suppliers are ready to provide automotive qualified components

Straw polls

- Should a study group be formed for “Optical multi-gig PHY for automotive applications”?
  - Y: N: A:
  - Room:

- I would participate in a “Optical multi-gig PHY for automotive applications” study group
  - Tally:

- I believe, my affiliation would support my participation in a “Optical multi-gig PHY for automotive applications” study group
  - Tally:

Next steps

- Ask 802.3 at Thursday's closing meeting to form study group

- If approved:
  - Request 802 EC to approve creation of the study group on Friday
  - First study group meeting would be during September 2019 IEEE 802.3 interim meeting
