

- Insert new text:
- 32.7.x.y PD model number

The value of this field is assigned by implementers using an implementer specific algorithm. The algorithm used shall ensure that the field value is unique to the PD type from the implementer.

- Note: Different implementers may use the same model number. The uniqueness requirement is only placed on PD produced by the implementer as opposed to uniqueness within the universe.

30.9.2.x.x aPDModelNumber

ATTRIBUTE

APPROPRIATE SYNTAX:

ResourceInfo

BEHAVIOUR DEFINED AS:

The value of PDModelNumber is assigned so as to uniquely identify a model of PD produced by the implementer. The value of this field is assigned implementers using a concatenation of the implementer's OUI and a sequence of printable strings of the implementor's choosing. While the selection of printable strings are left to the implementer, these strings shall ensure that the string sequence is unique to the PD type from the implementer.

- Note: PDModelNumber is not intended to be unique to each individual PD but unique to the PD model and identical for all PDs of that same model.

- Update Table 30-4 to include this attribute in “PD Basic Package (mandatory)” as a GET only
