Purpose

- Present a baseline specification proposal for 100GAUI-1, 200GAUI-2, and 400GAUI-4 C2C electrical interface in support of the 100 Gb/s, 200 Gb/s, and 400 Gb/s Chip-to-Chip (C2C) electrical interfaces operating with end-to-end FEC (without the need for segmented FEC) in support of ASIC/FPGA-ASIC/FPGA and ASIC/FPGA-retimer applications.
- To fulfill following Task Force objectives:
 - Define a single-lane 100 Gb/s Attachment Unit Interface (AUI) for chip-to-chip applications
 - Define a two-lane 200 Gb/s Attachment Unit Interface (AUI) for chip-to-chip applications
 - Define a four-lane 400 Gb/s Attachment Unit Interface (AUI) for chip-to-chip applications.

C2C Technology Choice Highlights

- Channel equalization based on a transceiver having TX FIR and RX CTLE/DFE
- Levering clause 120D structure with double the baud rate, COM 2.70, and updated package model
 - COM spreadsheet included see page 12 and 13
- Leverage P802.3ck adopted reference package specification (see [walker_3ck_01d_0719.pdf](#))
- Optional link training per CL 120D
- Operating with end-to-end FEC without the need to terminate the FEC on C2C link
- Pre-FEC BER $\leq 1E-5$
- End-to-end post FEC link BER for 100 GbE $\leq 1E-12$
- End-to-end post FEC link BER for 200 GbE and 400 GbE $\leq 1E-13$
- Informative/recommend maximum channel insertion at Nyquist: **20 dB*** .

* Max informative recommended loss value is place holder and require further investigation.

C2C Technology Choice Highlights, Cont.

- Reuse clause 82 PCS and clause 91 RS(544,514) FEC for 100 GbE
 - Including, Gray mapping, PAM4 encoding, and optional precoding
 - If the Task force decides to go with 100 GbE interleaved FEC it will be transparent to C2C interface
- Reuse clause 118/119 PCS/FEC for 200GbE/400 GbE
 - Including, Gray mapping, PAM4 encoding, and optional precoding
- Reuse clause 120D.3.2.2 for Receiver jitter tolerance
- Transmitter equalization feedback (optional) - Clause 120D.3.2.3.

C2C Link Topology

100GAUI-1 chip-to-chip channel

200GAUI-2 chip-to-chip channel

400GAUI-4 chip-to-chip channel

C2C Maximum Recommended Insertion Loss (IL)

- Informative max recommended IL scaled from equation (120D-1) assuming 20 dB* loss at Nyquist is given by equation:

– Max IL= $1.083 + 1.444 \times \sqrt{f} + 0.432 \times f$, for $0.01 \leq f \leq 53.125$ GHz.

* Max informative recommended loss value is place holder and require further investigation.

Common Mode Return Losses

- Common mode return loss is scaled from 93-4.

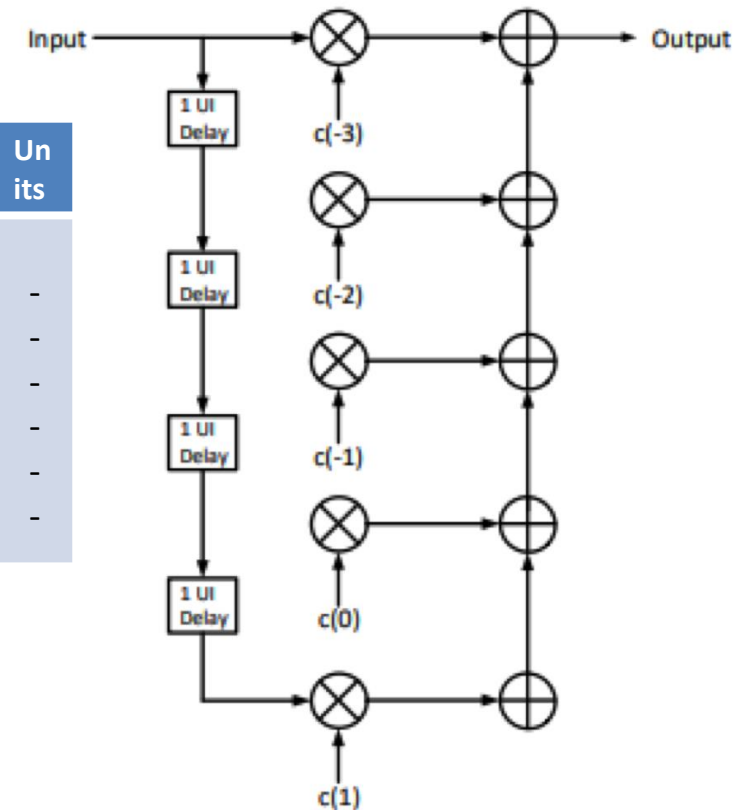

$$RL \geq \begin{cases} 9.05 - 0.4605 \times f, & 0.05 \leq f \leq 12 \text{ GHz} \\ 3.98 - 0.0375 \times f, & 12 \leq f \leq 38 \text{ GHz} \end{cases} \text{ dB}$$

Transmit Equalizer

- Transmit functional is based on 4 or 5 taps FIR, with $C(-3)$ as defined in clause 163
 - If $C(-3)$ proven to have no value, then will be removed.

Summary

- This contribution provide C2C baseline in support of P802.3ck task force objective
- The C2C baseline address ASIC/FPGA-ASIC/FPGA or ASIC/FPGA-retimer applications with up to **20 dB*** insertion loss
- The contribution does not address following items as they require further study:
 - The maximum recommended insertion loss of the channel (≥ 20 and ≤ 24 dB)
 - The benefits of Tx FIR C(-3) and determine if it can be removed
 - Reference receiver DFE tap length and coefficients
 - Details on the interference tolerance test.
