- Agreed on TP1a values... although discussion went long and some crafting on the floor occurred (D1.1 comment #101057)
- Agreed to separate TP4 near end and far end... but keep values as TBD (D1.1 comment #114)
- g_{DC2} Step Size (D1.1 comment #101043)

	8+22+18+16= 64	8+22+18+12= 60	11*7 = 77	12*4 = 48	

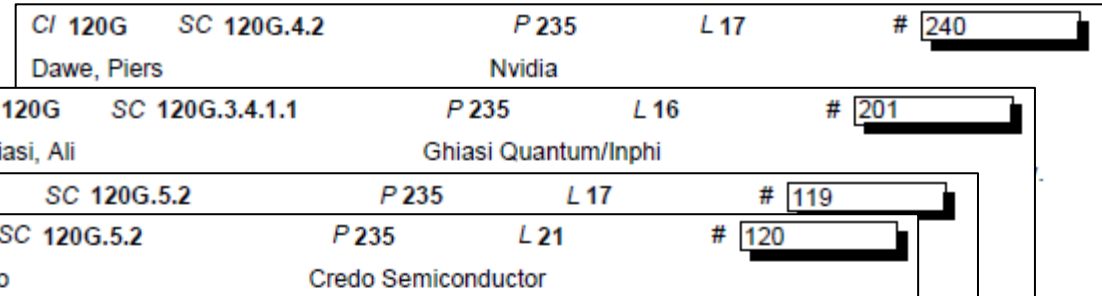

The spirit of the discussion from D1.1 was:

- Only include what settings seem reasonable
- Keep test case numbers down

7/28 discussion showed no consensus to make a change. And pointed out error in slide gDC(gDC2=-3) in D1.2 and #225, corrected above. It is unclear if comment #225 needs to be re-addressed

Proposed accept the values modifications on previous slide, leave dependence of gDC and gDC2.
