Method for high-count items

- Assume one case is worst case
- All other instances are the typical case
- Single count items are always at worst case

Downstream power levels

- Class 3 laser is needed to close the DS link budget
- Higher than most inline amplifiers

Proposal

- Does allowing a minimum of 1 dBm launch power for a 2.5-Gb/s US signal and a maximum of 9 dBm launch power for a 10-Gb/s US signal cause problems for TDM coexistence?
- If not, adopt the launch powers / extinction ratios shown in slides 17 and 19 for the 10 Gb/s and 2.5 Gb/s upstream speeds respectively for the next P802.3cs draft

Thank you
