165 SC 165.5.3.4 mmerman, George omment Type T Con	line 51	from 30 MHz t ion 165-17 with	o 10 Mhz and value of 20 - (adding a freque	0	ss Eq 165-17 at pg 10 10 Mhz to 30 MHz to IHz.			
I realize this is out of scope, and the comment is made to put the issue on the table - for resolution at initial SA ballot. The lower frequency ranges for the PHY, Link Segment specifications, and MDI are all over the place. Starting at 0 Hz is not going to be practical for measurements of a PSD going to up to 13.75 GHz. Likewise, the ANEXT and AFEXT loss are constrained starting at 1 MHz - also too low for practicality. Additionally, the TX PSD lower bound frequency is 5 MHz - below the link segment low frequency limit of the insertion loss. For all of these, going this low won't be necessary for link segments starting at 10 MHz. Suggest they be aligned at 10 MHz.						Commen s eliminated fr	P106 Ethernovia <i>t Status</i> X rom step 8 which and ambiguous	L13 n makes the last	# <u>796</u> step of ETM
Unlike my subsequent comments on return loss, I think this comment is likely ready to make the change.					SuggestedRemedy Change the sentency in step 8 to: "Apply steps 3, 4, and 5 to partial response g_n^m (instead of h_n) to calculate the associated REM. The ETM(m) is this REM calculated fo				

SuggestedRemedy

Change low frequency limit for Upper TX PSD mask (eq 165-6, Pg 96 line 1), Lower TX PSD mask (eq 165-7, Pg 96 line 7), PSANEXT (eq 165-35, Pg 108 line 24), and PSAFEXT (eq 165-36, Pg 109 line 18) to 10 MHz.
