An Updated, High-Radix Switch Oriented, Fitted COM PKG Model

Richard Mellitz – Samtec
Adee Ran – Cisco systems
Liav Ben-Artsi – Marvell Technology

Contributor: Noam Kutscher – Marvell Technology

Agenda

- High-Radix Ball-out concept and resulting package
- Package material losses
- COM fitted model
- Comparison COM runs & results
- Conclusion and recommendations

Supporters

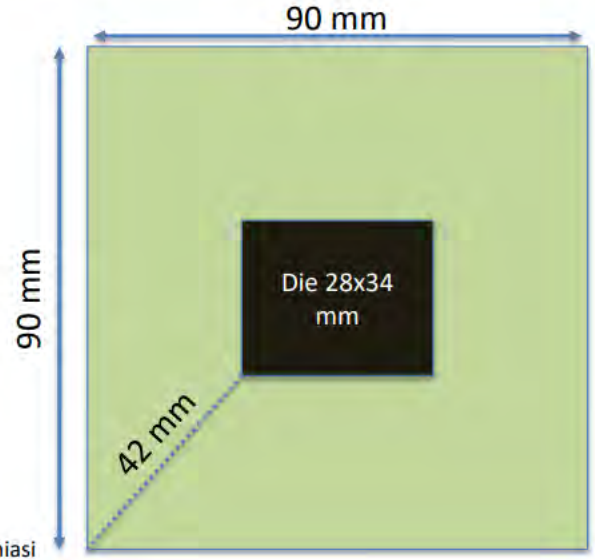
- Ali Ghiasi - Ghiasi Quantum LLC
- Rick Rabinovich - Keysight Technologies
- Upen Kareti - Cisco systems

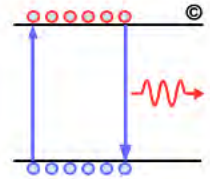
Ali Ghiasi's Suggested BGA Configuration

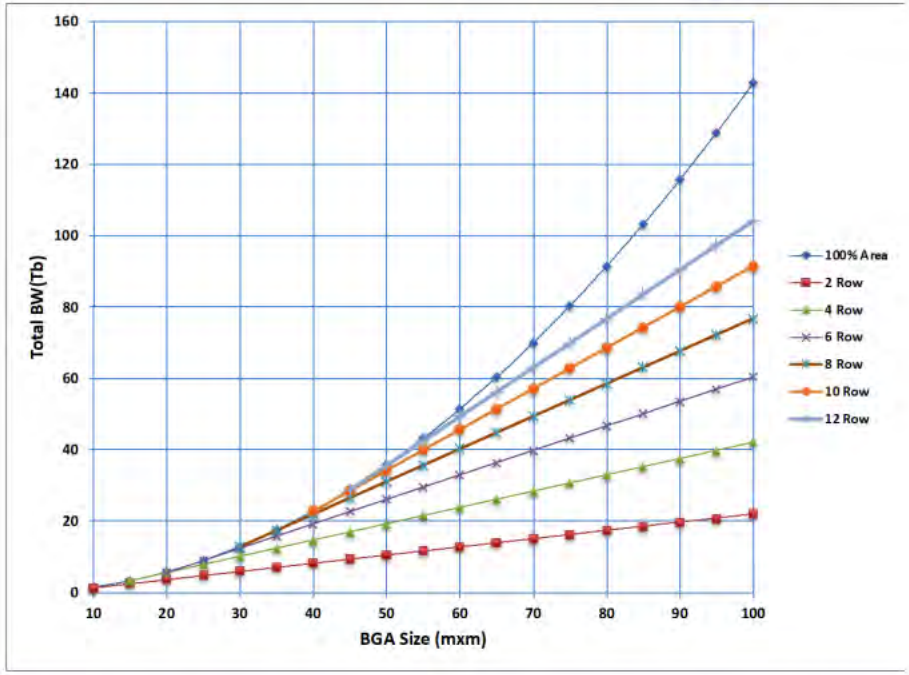
www.ieee802.org/3/df/public/22_10/22_0927/ghiasi_3df_01_220927.pdf

Hypothetical 512x200G Switch

- **Likely will require 90x90 BGA**
  - Provides √2 for FEXT pairs
  - Provides 2 balls separations for NEXT
  - For the hypothetical switch with 28x34 mm die results in 42 mm long substrate trace!







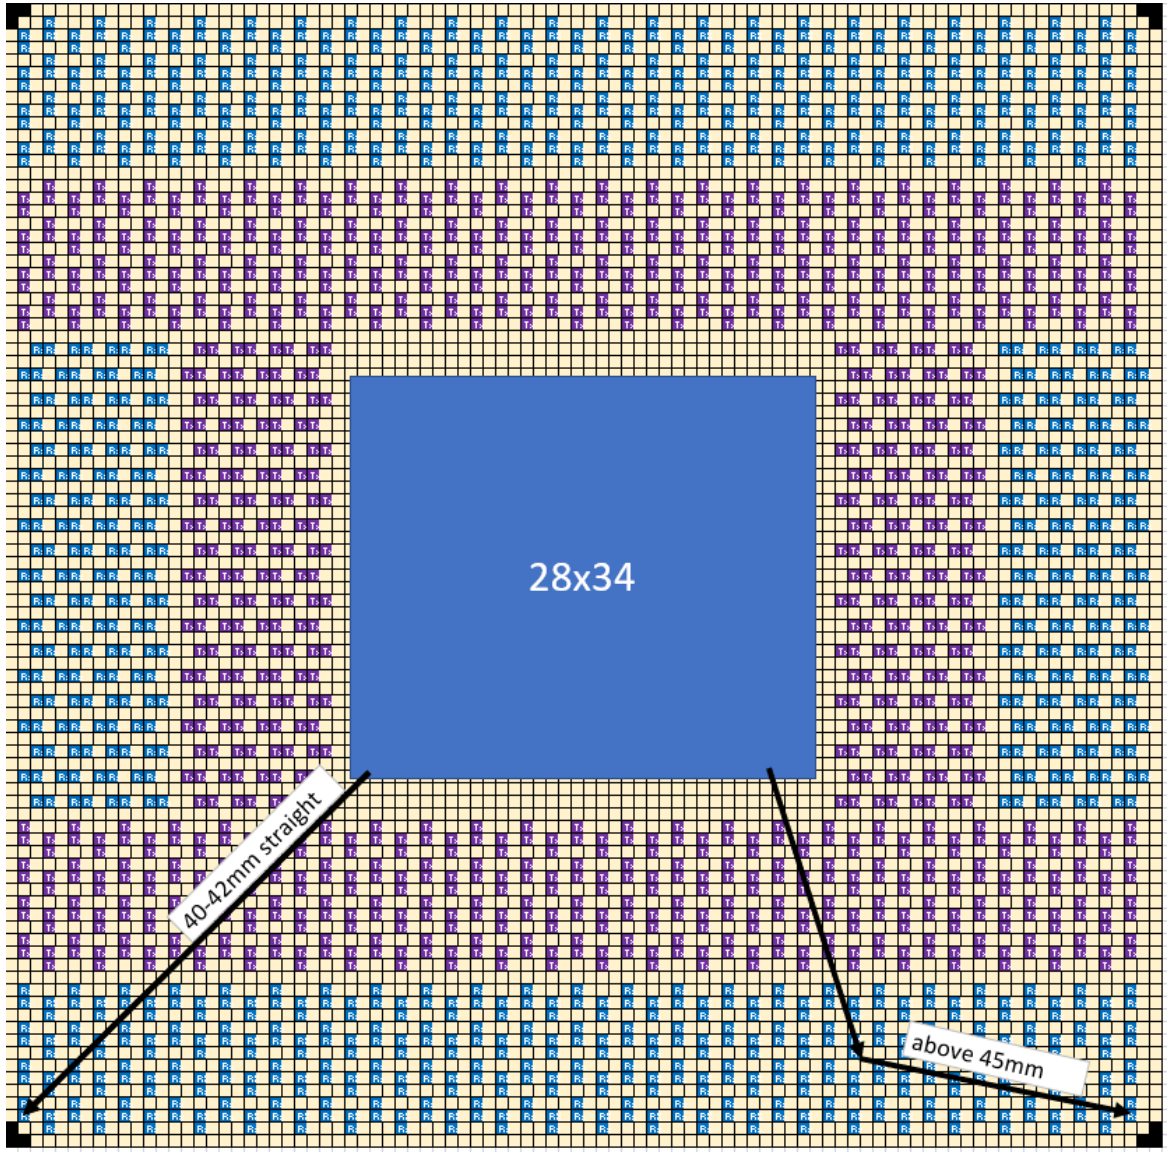
For the BGA ball grid assumed, see https://opg.optica.org/oe/fulltext.cfm?uri=oe-23-3-2085&id=310831

A. Ghiasi 802.3df Task Force 10

Full Population of 512 Tx Lanes & 512 Rx Lanes

92X92 BALL-OUT MATRIX ACCORDING

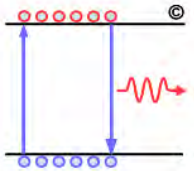
- No overhead was taken for CMOS, PCIe, or any addition signals
- Routing of Tx, or Rx lanes can easily be 40-45mm long, or even longer in congestion cases



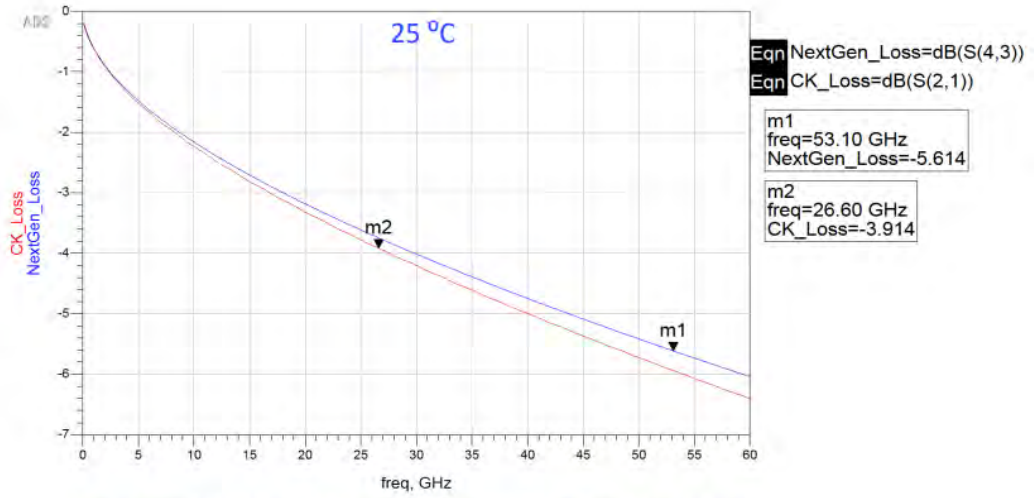
Expected Losses of Next Gen Material

- ghiasi_3df_01_220927: “benartsi_3df_01b_2207 uses best ABF conventional 27-45-27 µm construction and reports trace loss of 0.31 dB/mm @53 GHz (loss include transition via/BGA) • Benartsi loss expect to be lower ~0.22 dB/mm after accounting for improved surface roughness”

CK and Next Gen Package Losses for Reduced Trace Width

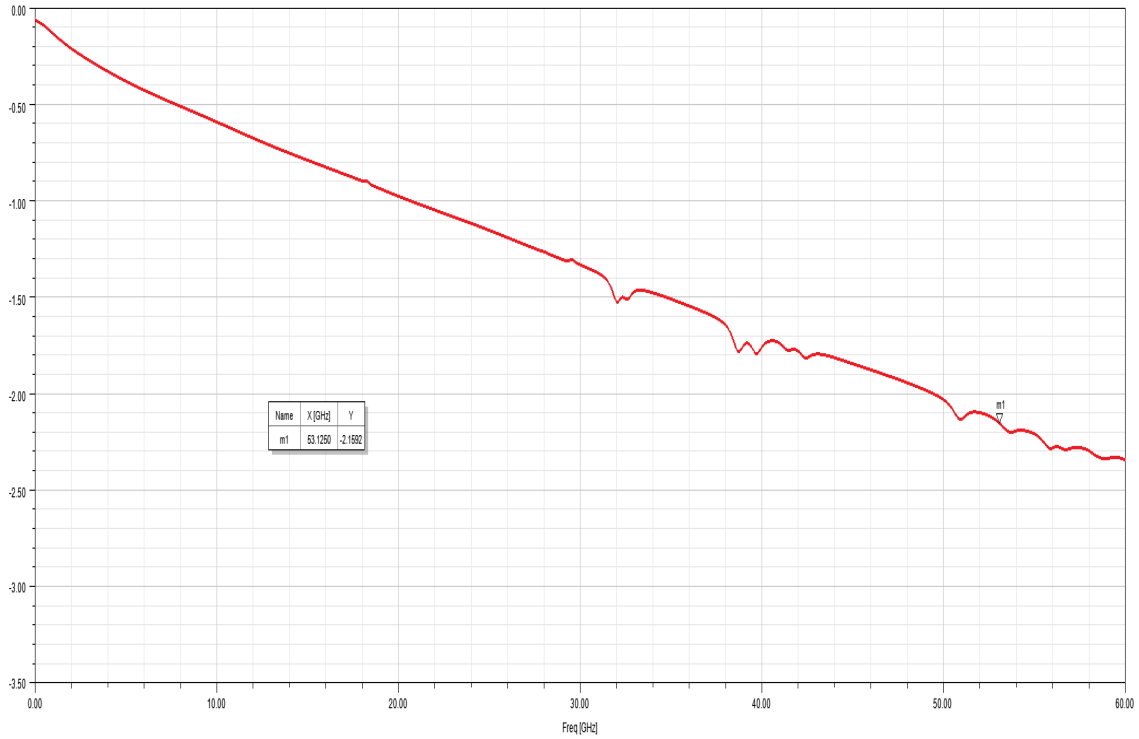


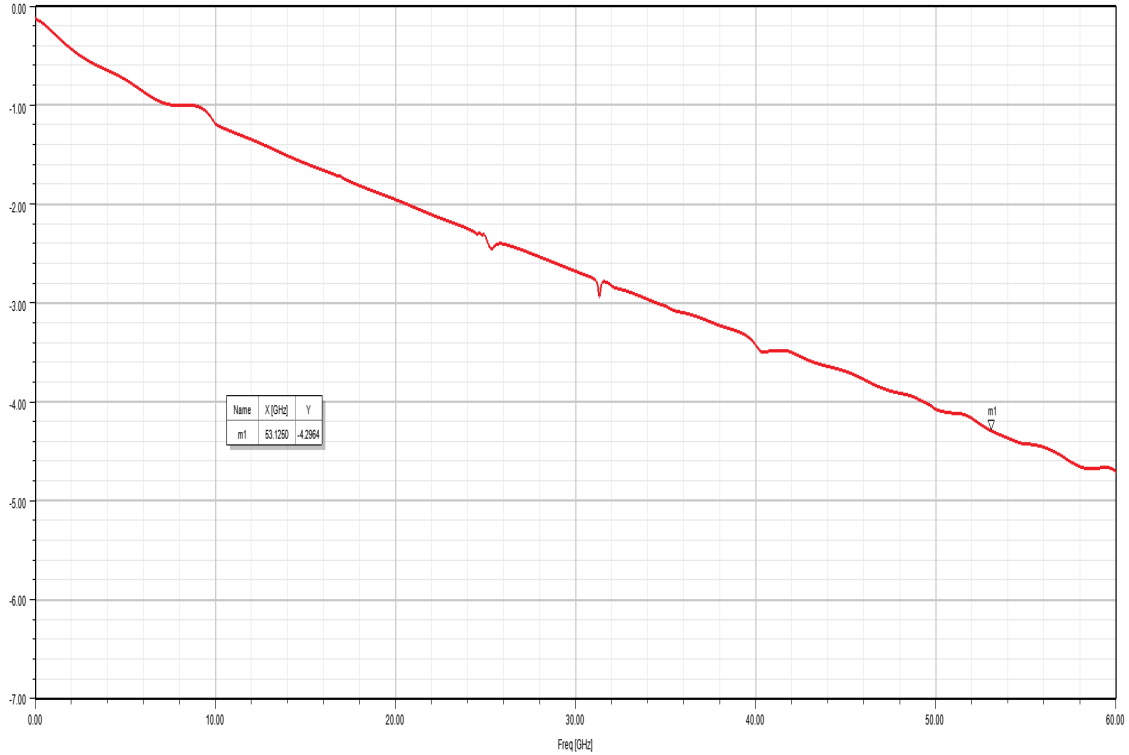
- **Adjust trace width to 27 µm as suggested by benartsi_3df_01b_2207**
  - Use the same Hurray surface roughness model that was previously matched best ABF film in 2018/2019
  - Reduced trace width may be required for some high radix switches implementations
  - Losses for **27 µm** wide 92.5 Ω stripline traces
    - For best ABF film from 2018/2019 the CK 30 mm package trace loss is 3.94 dB or 0.13 dB/mm instead of assumed 0.109 dB/mm assumed loss @26.56 GHz
    - Next Gen 2022 ABF film the 30 mm package trace loss would be 5.6 dB or 0.19 dB/mm @53.1 GHz (6.75 dB or ~0.225 dB/mm 90°C).



Adjusted Extraction of Loss/mm

- 40µ dielectric height ; 15µ copper thickness ; 27µ-45µ-27µ trace geometry
- The resulting loss/mm ≈ 0.21dB
- Conductivity was updated to correlate and account for high temperature
- Correlates to the expected and measured loss/mm

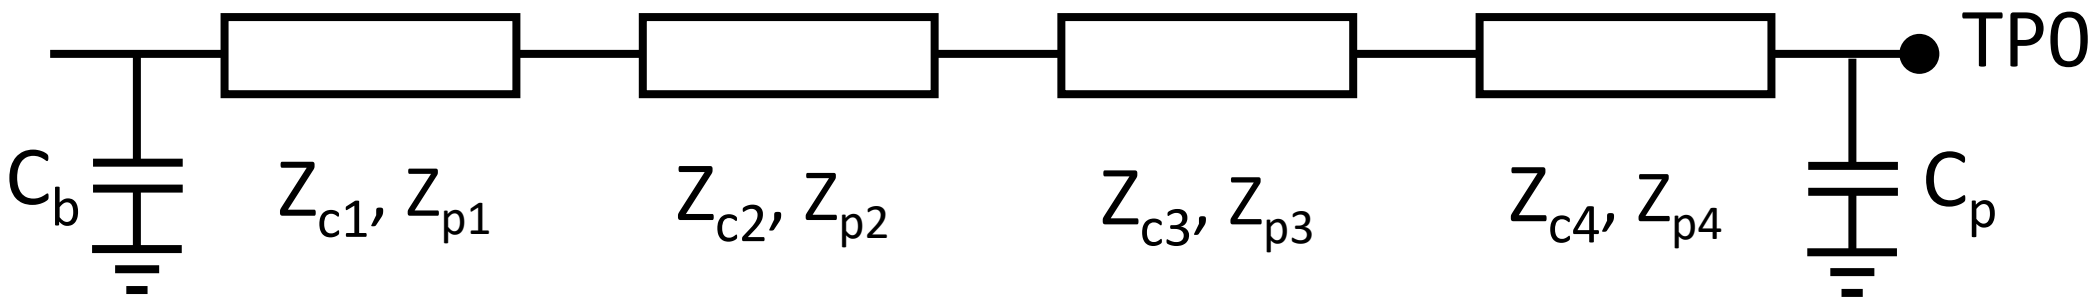




Iteratively adjust γ_0, a_1, a_2, τ

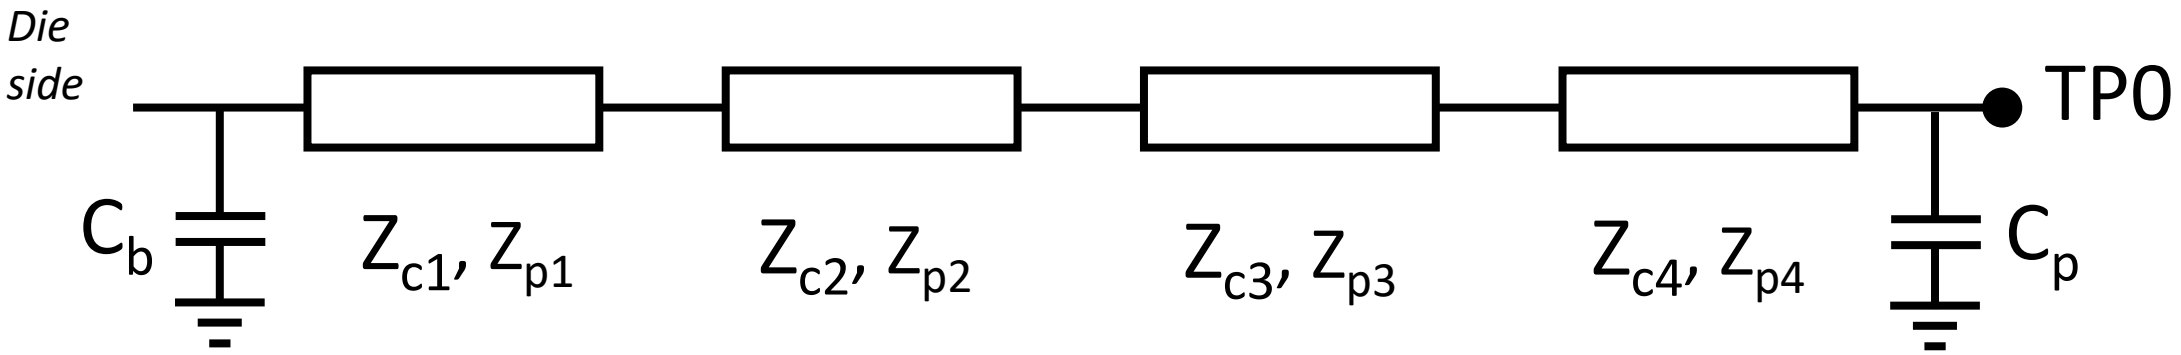
COM MODEL: IEEE802.3 ANNEX 93A.1.2.3

- Also tune
  - Z_p, Z_c, C_b, C_p



COM Model Results

COM MODEL: IEEE802.3 ANNEX 93A.1.2.3



30ff 92 Ω, 12/30/45 mm 70 Ω, 1.0 mm 80 Ω, 1.0 mm 100 Ω, 0.5 mm 50ff

$\gamma_0 = 0$, $a_1 = 0.0008455$, $a_2 = 0.000340225$, $\tau = 0.00644805$

Graphic View of Results

45 MM PKG HAS ABOUT -10DB LOSS AT 53.125 GHZ

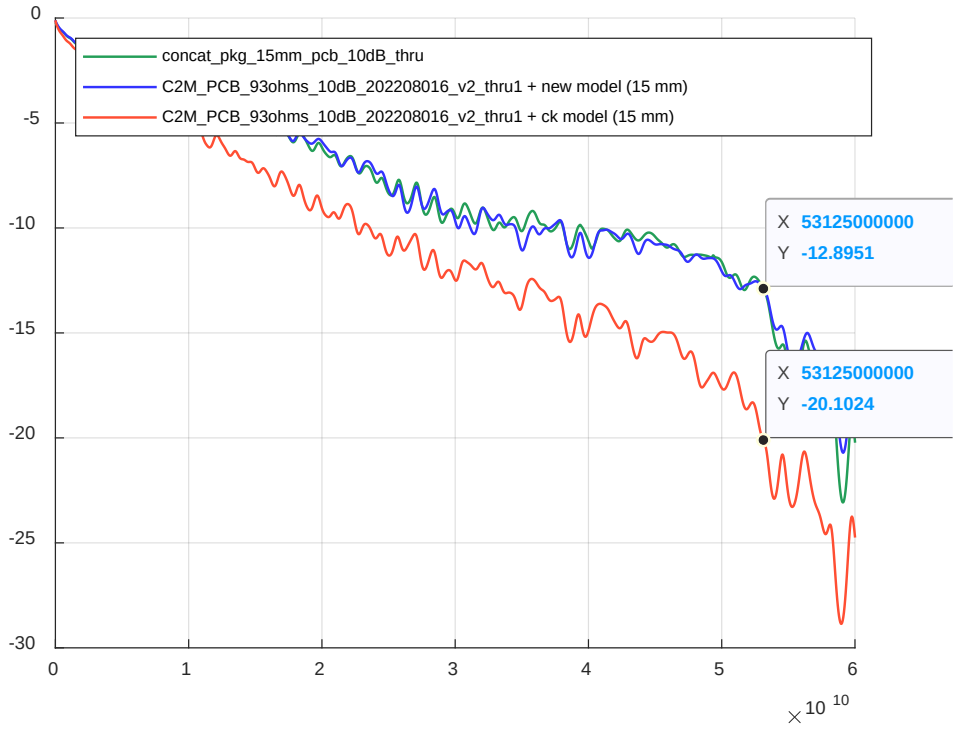
Frequency Domain Comparison

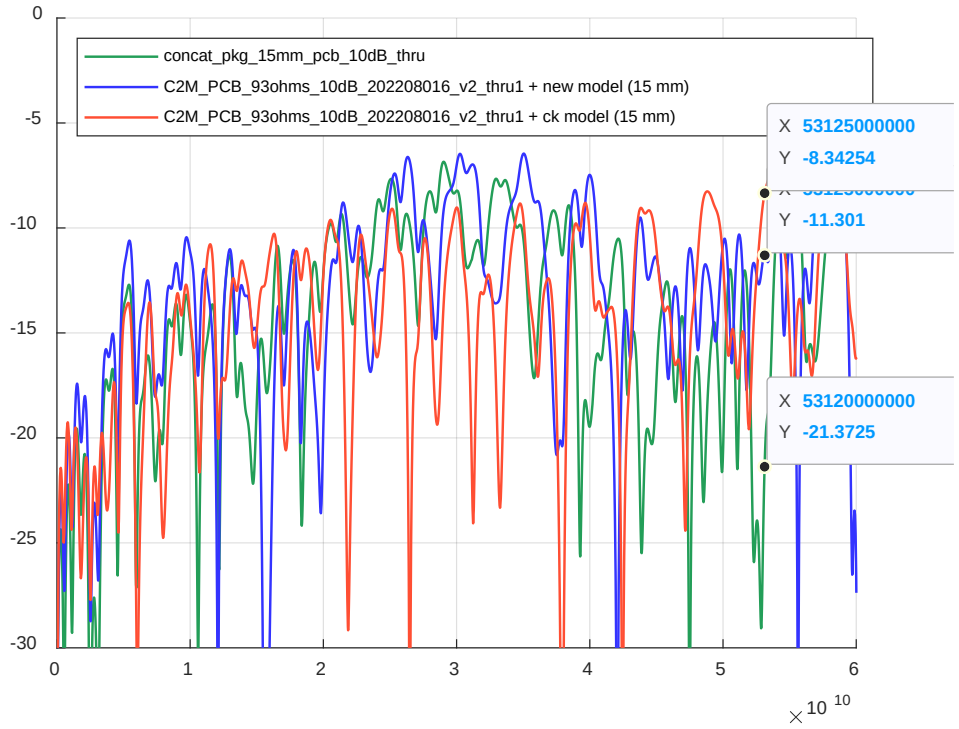
(After concatenation, how well does the “model” channel match “HFSS” channel?)

Example case: 15 mm + 10 dB

ILDD

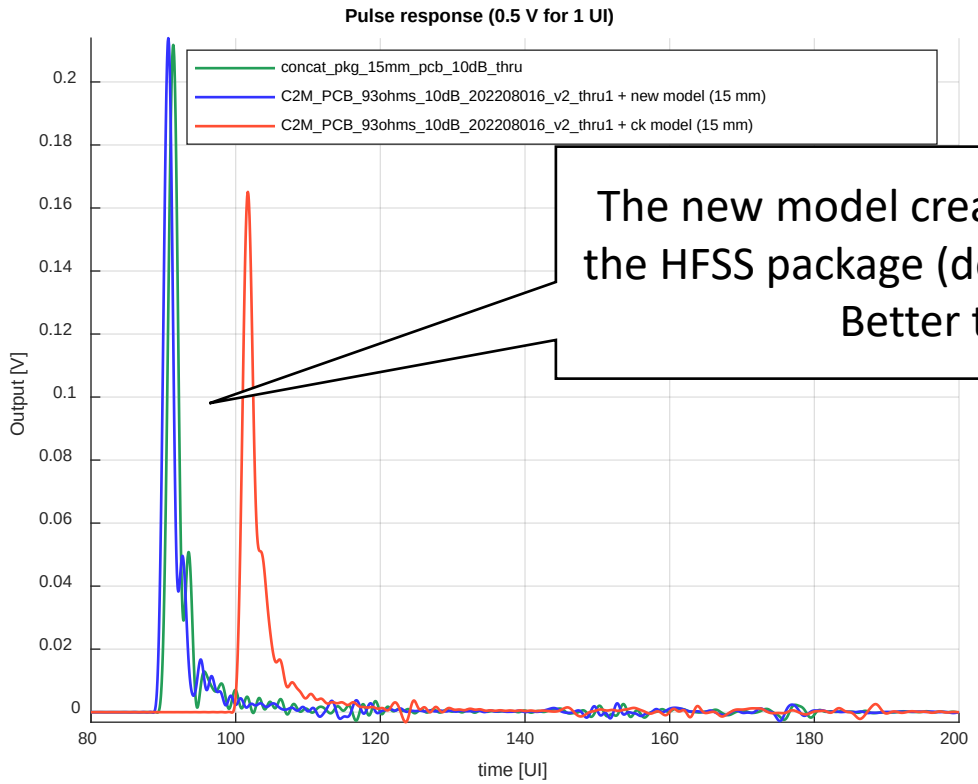


RLDD



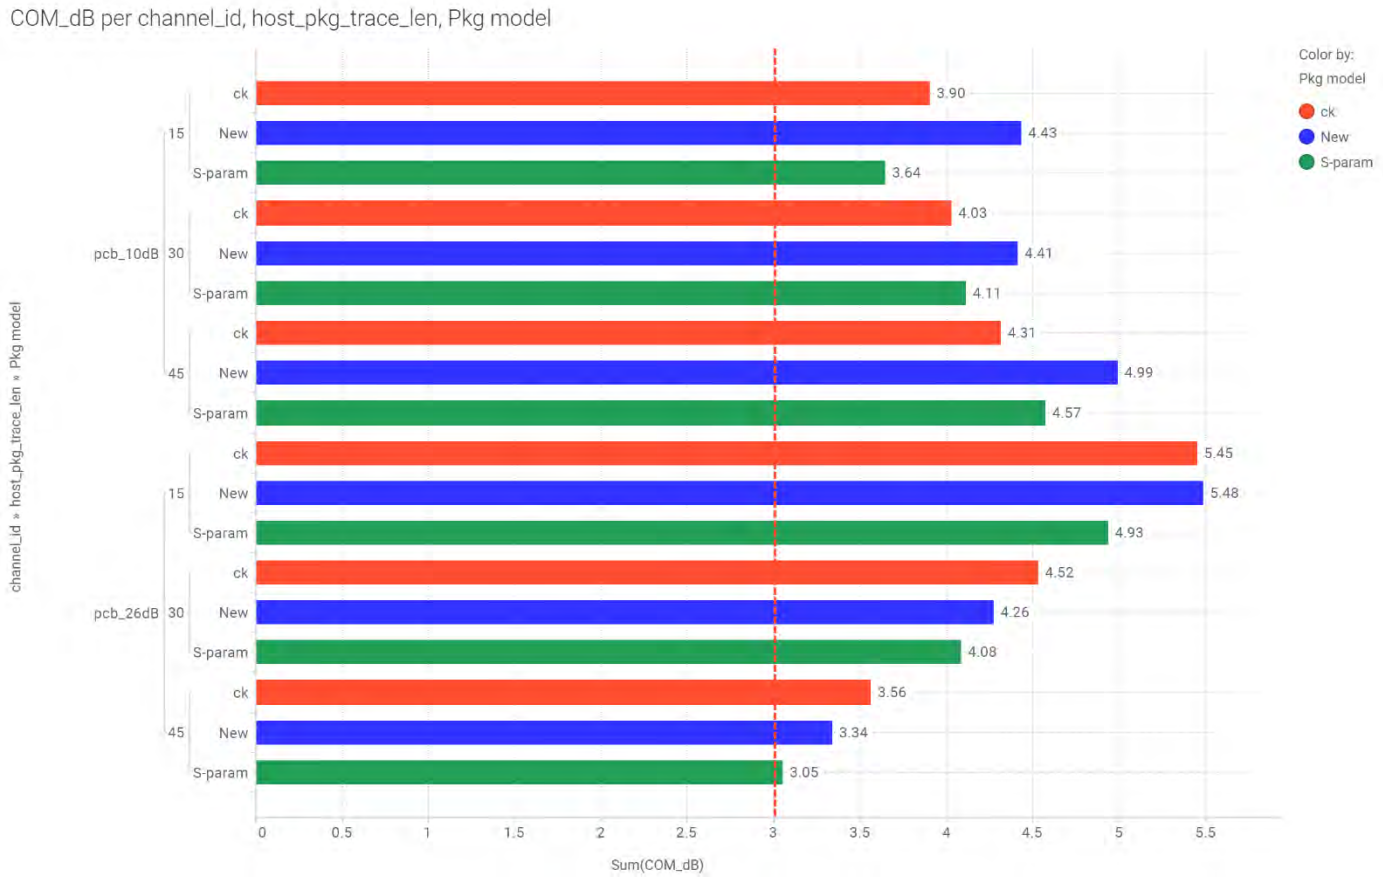
Time domain SBR comparison

Example case: 15 mm + 10 dB



The new model creates a response that is close to the HFSS package (delay, pulse shape, pulse height)
Better than the ck model

COM Results Comparison



- COM results with the updated fitted model (blue) are consistently higher than with HFSS S-parameter concatenation (green)
  - The difference is usually 0.2-0.5 dB
  - The “shortest” combination is an exception
- For the high loss channel, the new model is closer to the HFSS results than the ck model (red)
  - For the low loss channel, the ck model had worse COM in 2 cases!
- The fitted model is somewhat optimistic…?
  - but in a more consistent way than the old model

Conclusions & Recommendations

- An updated correlated COM package model was supplied
  - Accounts for:
    - High radix switch package routing layers
    - ~90°C package operating temperature
    - A Realistic trace width
- A possible ball-out was shown to occupy 92x92 ball matrix
  - Recommend to have at least one COM PKG length setting at ~45mm
  - Other 1/2 settings to be 12 (for backward compatibility) & 30
- Initial COM runs with the updated fitted model were shown to have ~0.3dB better COM result compared to HFSS concatenated models
- Recommend using fitted model with 12;30;45mm while keeping COM result discrepancy in mind

Thank You!
