Mike Dudek, Marvell, Ali Ghiasi, Ghiasi Quantum,
John Johnson, Broadcom, Guangcan Mi, Huawei,
Roberto Rodes, Coherent, Helen Xu, Huawei

Comment #399 Concerns

- The presented 100G/lane data shows that the proposal doesn't work - Measured J4u03 exceeds the proposed spec limit with no added SJ or RJ.
- There is no 200G/lane optical TX jitter data despite 200G optics being available for a year
- The presented data shows that a BER test catches the jitter issue
- The test requires new data acquisition which adds test time (cost) without demonstrated additional benefit
- There is no optics industry listed support on the proposal presentation
- Supporting 200G/lane data is not likely to be generated for this proposal because optics industry does not see value in it and will not invest the time to test it.
