

P802.3dm draft outline, new Clause only

2xx Physical Coding Sublayer (PCS), Physical Medium Attachment (PMA) sublayer, and baseband medium, type 2.5G/100MBASE-T1-L, 2.5G/100MBASE-T1-H, 5G/100MBASE-T1-L, 5G/100MBASE-T1-H, 10G/100MBASE-T1-L, 10G/100MBASE-T1-H, 2.5G/100MBASE-V1-L, 2.5G/100MBASE-V1-H, 5G/100MBASE-V1-L, 5G/100MBASE-V1-H, 10G/100MBASE-V1-L, and 10G/100MBASE-V1-H

This is a draft proposal for how a Clause could be structured based on the P802.3dm project documents, including Objectives. This provides flexibility to have different requirements for the different speeds and cabling. Subclauses can be combined later if the requirements are the same, or the requirement can be put in the first subclause in the document and the one later in the document can refer back to it.

Due to the fact that we are limited to a maximum of five levels in the specification, the high speed and low speed requirements are in separate subclauses without a subsection above the pair. This is also the case for the coax and shielded balanced copper cabling.

2xx.1 Overview

May be added by Editor based on project details.

2xx.1.1 Nomenclature

May be added by Editor based on project details.

In order to efficiently describe the three PHYs, the nomenclature MultiG is used to abbreviate 2.5G/5G/10G when referring to the set of PHYs.

2xx.1.2 PHY/PMD types

I have included a table here to show the different PHYs to be defined and what all the characters that I am using in the names mean. These are subject to approval.

x/y x is the high transmit speed, y is the low transmit speed

T1 – single shielded balanced pair of conductors (SBP)

V1 – single coaxial cable (Coax)

L – device that transmits at the low speed and receives at the high speed

H – device that transmits at the high speed and receives at the low speed

<i>PHY name</i>	<i>Transmit speed</i>	<i>Receive speed</i>	<i>Cable type</i>
