

# POPI Brainstorming

## Sideband Payload Sizes and Latency Requirements

- PTP Timestamping
- MDIO Register Access
- EEE Support
- PLCA

## How much of the Preamble can we potentially consume?

- Ordered sets send during IPG in higher speed links
- Clause 96 does consume preamble bytes
- We should coordinate with EMS, focused on 50gbps or faster

## Potentially out of scope (needs PAR modification or new project)

- PTP Timestamping

# POPI Mindmap

On-the-fly idea capture of POPI concepts  
to further architectural development.
