4  | DATE: 04 October 2024             |
5  | NAME: Charity Reed                |
6  | COMPANY/AFFILIATION: UNH-IOL      |
7  | E-MAIL: creed@iol.unh.edu         |
8  |                                     |
9  | REQUESTED REVISION:               |
10 |   STANDARD: 802.3-2022             |
11 |   CLAUSE NUMBER: Figure 149-24    |
12 |   CLAUSE TITLE: Receive state diagram |
13 | PROPOSED REVISION TEXT:           |
14 | Add                                |
15 |                                     |
16 | "rx_boundary <= FALSE"            |
17 |                                     |
18 | to the beginning of the CHECK_READ state in Figure 149-24. |
19 |                                     |
20 | RATIONALE FOR REVISION:           |
21 | The rx_boundary TRUE/FALSE conditions in 149.3.9.4.3 are not clear in |
22 | regards to when the variable is set to FALSE after being set to TRUE. |
23 | Adding this to the state diagram would make it clear that rx_boundary |
24 | is set FALSE after being acted upon in the state diagram. Without this |
25 | clarification the state diagram could rapidly cycle through the |
26 | LOAD_SYMBOL state potentially filling every rx_oam<rx_cnt> with the |
27 | same rx_oam_field<9:0>. While it is unlikely any implementation does |
28 | this the clarification would be helpful. |
29 |                                     |
30 | IMPACT ON EXISTING NETWORKS:      |
31 | This change will impact any 2.5GBASE-T1, 5GBASE-T1, or 10GBASE-T1 PHY |
32 | implementations that keeps rx_boundary = TRUE beyond the time the state |
33 | diagram acts upon it. Any implementation that kept rx_boundary = TRUE |
34 | in this way would not have a functional OAM in any practical way. |
35 |                                     |
